Editorial on the Research Topic

Current concepts and recent advances on pediatric appendicitis

Acute appendicitis is one of the most common pediatric surgical emergencies with a lifetime risk of approximately 8%, peaking between 10 and 15 years of age. Although it is a common illness, the exact pathophysiology of acute appendicitis remains somewhat unclear. Historically, acute appendicitis was considered to be an irreversible progressive disease starting with mild inflammation, but it will progress to necrosis, perforation and peritonitis over time. Early intervention (removal of the appendix) was therefore warranted. Recently, we rather endorse the idea that two different forms of acute appendicitis exist: uncomplicated (or simple) and complicated (or complex) appendicitis. Each form has its own clinical presentation, epidemiology, most likely pathophysiology, and also maybe treatment strategy. As both diagnostic work-up and treatment of acute appendicitis can be challenging, particularly in the pediatric population, further research on this topic is essential to improve the clinical care of these patients.

This special issue of *Frontiers in Pediatrics*: "Current concepts and recent advances on pediatric appendicitis" consists of four articles focusing on diagnostics, treatment, and pathophysiology of acute appendicitis. These articles have been selected as all of them contribute to the ongoing improvement of both clinical care as well as research in pediatric patients with appendicitis.

Silva et al. investigated the agreement between histopathological and intraoperative classifications and evaluated the predictive potential of these classifications for the outcome. The agreement was considered moderate and intraoperative classification was able to predict the postoperative clinical outcomes.

Over the past few years several biomarkers obtained from preoperative serum samples have been proposed as predictors of clinical outcomes. **Godjonsdottir et al.** evaluated differences in serum concentrations of IgE and Th2-associated interleukins
