## **Functional Evaluation Of Stroke Patients:**

*Functional Evaluation of Stroke Patients* Naoichi Chino, John L. Melvin, 2012-12-06 Stroke is one of the major causes of disability in the world. Consequently, an effective rehabilitation regimen is the goal of specialists working in the field worldwide. The implementation of rehabilitation programs for the stroke patient is broad in scope and requires first of all an objective scientific evaluation method. In 1980, the World Health Organization developed the International Classification of Impairments, Disabilities, and Handicaps. It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socioeconomic factors when defining handicaps, thus making it difficult to use the same functional evaluation instrument for the three phenomena. In this monograph, experts in the treatment of stroke from Japan, the United States, and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994. All the participants freely contributed their views on the functional assessment and prognosis of stroke patients. Indeed, their contributions shed light on possible breakthroughs in the future for the development of rehabilitation regimens for stroke patients.

**Evaluation of Functional Capacity After Stroke with Special Emphasis on Motor Function and Activities of Daily Living** Birgitta Lindmark, 1988 Functional Assessment for Adults with Disabilities National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Functional Assessment for Adults with Disabilities, 2019-08-31 The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is the inability to engage in any substantial gainful activity (SGA) by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental cognitive and noncognitive functional abilities relevant to work requirements. This report discusses the types of information that support findings of limitations in functional abilities relevant to work requirements and provides findings and conclusions regarding the collection of information and assessment of functional abilities relevant to work requirements.
