Fuelling The Future:

Fuel for the Future George Domazetis, 2019-08-09 We are currently facing a global problem caused by increasing levels of greenhouse gases mostly derived from fossil fuels resulting in climate change Communities want an affordable and secure supply of power alongside emissions reductions Coal electricity generation offers a secure and affordable supply but currently this comes with high emissions This volume examines efforts by both industry and governments to develop a cleaner use of low rank coals It presents leading research on creating affordable high quality fuel for efficient power generation with a trajectory toward affordable zero emissions production This book will be of interest to organisations active in developing clean usage of coal and which conduct research on low emissions power It will also contribute to policy development of low and zero emissions coal power generation particularly in regions with abundant deposits of low cost brown coal lignite and subbituminous coal including the US China Europe India Indonesia and Australia *Multiple Imaginaries of the Fossil Fuel Free Future* Amelia Mutter, 2020-02-03 I k lvattnet av klimatkrisen har det blivit allt tydligare att det fossilbaserade transportsystemet m ste genomg en global omvandling M nga alternativ f r f rnyelsebara drivmedel har f reslagits alla omgivna av f rest llningar om hur dessa tekniker kommer att bidra till en b ttre framtid Dessa f rest llningar p verkar utvecklingen eftersom implementeringen av varje alternativ teknik kr ver uppbyggnad av m ngfaldiga socio tekniska ensembler som st der dess anv ndning Som ett resultat av detta r det troligt att processen f r att ers tta fossila br nslen med dessa f rnybara alternativ kommer bli komplex Avhandlingen betraktar uppkomsten av tv av dessa f rest llningar om f rnybara br nslen och studerar visioner om biogas och el i ett svenskt sammanhang Biogas har en l ng historia som transportbr nsl i Sverige d r ven om den utg r en liten andel av den totala br nslanv ndningen utg r den nd grunden f r m nga kommunala kollektivtrafiksystem Elektriska fordon har blivit alltmer attraktiva n r fler akt rer anammar en f rest llning som ser en framtid d r fordon r delade autonoma och elektriska Denna interaktion exemplifieras i kollektivtrafik i st der eftersom m nga kommuner b rjar implementera elbussar i ett f rs k att ka energieffektiviteten och minska f roreningarna Denna avhandling f ljer tre fallstudier d r f rest llningarna om biogas och elfordon samverkar kollektivtrafik i st derna Link ping respektive Malm samt en analys av det omfattande nationella policydokumentet Fossilfrihet p v g Avhandlingen bidrar till en bredare f rst else f r hur visioner kan p verka tr ghet och f r ndring av transportalternativ inom den bredare omst llningen till en fossilfri framtid In the wake of the climate crisis it has become increasingly evident that the fossil fuel based transport system must undergo a global transformation Numerous renewable fuel alternatives have been suggested accompanied by imaginaries of how these technologies will contribute to a better future These imaginaries have a wide ranging impact because the implementation of each alternative technology will require the build up of multifarious socio technical ensembles that support their use As a result replacing fossil fuels with these renewable alternatives is likely to be a complex process This dissertation considers the emergence of two such visions of renewable fuels studying imaginaries of

biogas and electricity in the Swedish context Biogas has a long history of use as a transport fuel in Sweden where although it makes up a small percentage of total fuel use it also forms the basis of numerous municipal public transport systems Meanwhile electric vehicles have become increasingly attractive as more actors subscribe to an imaginary that sees the future of vehicles as shared autonomous and electric This interaction is exemplified in urban public transportation as many municipalities begin to implement electric buses in an attempt to increase energy efficiency and reduce pollution This thesis follows three case studies where the imaginaries of biogas and electric vehicles interact urban public transport in the municipalities of Linköping and Malmö and analysis of a comprehensive national policy document Fossil fuel freedom on the road It contributes to a wider understanding of how visions can influence obduracy and change of transport alternatives within the wider transformation to a fossil fuel free future **Petroleum Times** ,1928 *Fuel Oil Journal* ,1927
