Gender Structured Population Modeling:

Gender-structured Population Modeling M. Iannelli, M. Martcheva, F. A. Milner, 2005-04-01 This book gives a unified presentation of and mathematical framework for modeling population growth by couple formation summarizing both past and present modeling results It provides results on model analysis gives an up to date review of mathematical demography discusses numerical methods and puts deterministic modeling of human populations into historical perspective

Mathematica Laboratories for Mathematical Statistics with CD-ROM Jenny A. Baglivo, 2004-11-01 Integrating computers into mathematical statistics courses allows students to simulate experiments and visualize their results handle larger data sets analyze data more quickly and compare the results of classical methods of data analysis with those using alternative techniques This text presents a concise introduction to the concepts of probability theory and mathematical statistics The accompanying in class and take home computer laboratory activities reinforce the techniques introduced in the text and are accessible to students with little or no experience with Mathematica These laboratory materials present applications in a variety of real world settings with data from epidemiology environmental sciences medicine social sciences physical sciences manufacturing engineering marketing and sports Included in the book are parametric nonparametric permutation bootstrap and diagnostic methods Permutation and bootstrap methods are discussed side by side with classical methods in the later chapters Includes a CD ROM with 238 laboratory problems written as Mathematica notebooks A Two-sex, Age-structured Population Model in Discrete-time Stephen Eric Tennenbaum, 2006 **Dynamic Population Models** Robert

Schoen, 2007-05-05 Dynamic Population Models is the first book to comprehensively discuss and synthesize the emerging field of dynamic modeling Incorporating the latest research it includes thorough discussions of population growth and momentum under gradual fertility declines the impact of changes in the timing of events on fertility measures and the complex relationship between period and cohort measures The book is designed to be accessible to those with only a minimal knowledge of calculus **Integrated Population Biology and Modeling Part B**, 2019-02-05 Integrated Population

Biology and Modeling Part B Volume 40 offers very delicately complex and precise realities of quantifying modern and traditional methods of understanding populations and population dynamics with this updated release focusing on Prey predator animal models Back projections Evolutionary Biology computations Population biology of collective behavior and bio patchiness Collective behavior Population biology through data science Mathematical modeling of multi species mutualism new insights remaining challenges and applications to ecology Population Dynamics of Manipur Stochastic Processes and Population Dynamics Models The Mechanisms for Extinction Persistence and Resonance Theories of Stationary Populations and association with life lived and life left and more Studies human and animal models that are studied both separately and throughout chapters Presents a comprehensive and timely update on integrated population biology Computational Methods for Option Pricing Yves Achdou, Olivier Pironneau, 2005-07-18 This book allows you to understand fully the modern

Environment Rubem P. Mondaini, 2020-07-06 This volume offers a collection of carefully selected peer reviewed papers presented at the BIOMAT 2019 International Symposium which was held at the University of Szeged Bolyai Institute and the Hungarian Academy of Sciences Hungary October 21st 25th 2019 The topics covered in this volume include tumor and infection modeling dynamics of co infections epidemic models on networks aspects of blood circulation modeling multidimensional modeling approach via time frequency analysis and Edge Based Compartmental Model and more This book builds upon the tradition of the previous BIOMAT volumes to foster interdisciplinary research in mathematical biology for students researchers and professionals Held every year since 2001 the BIOMAT International Symposium gathers together in a single conference researchers from Mathematics Physics Biology and affine fields to promote the interdisciplinary exchange of results ideas and techniques promoting truly international cooperation for problem discussion The 2019 edition of BIOMAT International Symposium received contributions by authors from 14 countries Brazil Cameroon Canada Colombia Czech Republic Finland Hungary India Italy Russia Senegal Serbia United Kingdom and the USA Selected papers presented at the 2017 and 2018 editions of this Symposium were also published by Springer in the volumes Trends in Biomathematics Modeling Optimization and Computational Problems 978 3 319 91091 8 and Trends in Biomathematics Mathematical Modeling for Health Harvesting and Population Dynamics 978 3 030 23432 4

Computational And Mathematical

Population Dynamics Necibe Tuncer, Maia Martcheva, Olivia Prosper, Lauren Childs, 2023-06-21 This book is a collection of works that represent the recent advancements in computational and mathematical methods applied to population dynamics It concentrates on both development of new tools as well as on innovative use of existing tools to obtain new understanding of biological systems The volume introduces new state of the art techniques for defining and solving numerically control problems in mathematical biology in which the control appears linearly Such problems produce simpler optimal controls that can be implemented in practice The book further develops tools for fitting multi scale models to multi scale data and studying the practical identifiability of the parameters from multi scale data Novel model of Zika with Wolbahia infection in mosquitoes suggests that the most suitable control strategy to control Zika in the absence of Wolbahia is killing mosquitoes but the most suitable strategy when mosquitoes are Wolbahia infected is the treatment of humans A completely novel methodology of developing discrete continuous hybrid models of multi species interactions is also introduced together with avantgarde techniques for discrete continuous hybrid models analysis A mathematical model leads to new observations of the within host virus dynamics and its interplay with the immune responses In particular it is observed that the parameters promoting CTL responses need to be boosted over parameters promoting antibody production to obtain a biologically relevant steady state A novel stochastic model of COVID 19 investigates quarantine and lock down as important strategies for control and elimination of COVID 19

Sensitivity Analysis: Matrix Methods in Demography and Ecology Hal

Caswell,2019-04-02 This open access book shows how to use sensitivity analysis in demography It presents new methods for individuals cohorts and populations with applications to humans other animals and plants The analyses are based on matrix formulations of age classified stage classified and multistate population models Methods are presented for linear and nonlinear deterministic and stochastic and time invariant and time varying cases Readers will discover results on the sensitivity of statistics of longevity life disparity occupancy times the net reproductive rate and statistics of Markov chain models in demography They will also see applications of sensitivity analysis to population growth rates stable population structures reproductive value equilibria under immigration and nonlinearity and population cycles Individual stochasticity is a theme throughout with a focus that goes beyond expected values to include variances in demographic outcomes The calculations are easily and accurately implemented in matrix oriented programming languages such as Matlab or R Sensitivity analysis will help readers create models to predict the effect of future changes to evaluate policy effects and to identify possible evolutionary responses to the environment Complete with many examples of the application the book will be of interest to researchers and graduate students in human demography and population biology The material will also appeal to those in mathematical biology and applied mathematics

Advances in Discrete Dynamical Systems, Difference Equations and Applications Saber Elaydi, Mustafa R. S. Kulenović, Senada Kalabušić, 2023-03-25 This book comprises selected papers of the 26th International Conference on Difference Equations and Applications ICDEA 2021 held virtually at the University of Sarajevo Bosnia and Herzegovina in July 2021 The book includes the latest and significant research and achievements in difference equations discrete dynamical systems and their applications in various scientific disciplines The book is interesting for Ph D students and researchers who want to keep up to date with the latest research developments and achievements in difference equations discrete dynamical systems and their applications the real world problems

Mathematical Studies on Human Disease Dynamics Abba B. Gumel, Carlos Castillo-Chávez, Ronald E. Mickens, Dominic P. Clemence, 2006 This volume contains the proceedings of the AMS SIAM IMS Joint Summer Research Conference on Modeling the Dynamics of Human Diseases Emerging Paradigms and Challenges held in Snowbird Utah July 17 21 2005 The goal of the conference was to bring together leading and upcoming researchers to discuss the latest advances and challenges associated with the modeling of the dynamics of emerging and re emerging diseases and to explore various control strategies The articles included in this book are devoted to some of the significant recent advances trends and challenges associated with the mathematical modeling and analysis of the dynamics and control of some diseases of public health importance In addition to illustrating many of the diverse prevailing epidemiological challenges together with the diversity of mathematical approaches needed to address them this book provides insights on a number of topical modeling issues such as the modeling and control of mosquito borne diseases respiratory diseases animal diseases such as foot and mouth disease cancer and tumor growth modeling influenza HIV HPV rotavirus etc This book also touches upon other important topics such as the use
