

1. English Unit (Compare to SI Units).

The International System of Units (SI), commonly known as the metric system, is the international standard for measurement. The metric system and English system, also called the imperial system of measurements, are both common systems of measurement used today. The main difference between imperial and metric units are that metric units are easier to convert between because those conversions require only multiplying or dividing by powers of 10. Converting imperial units is much less straightforward. Another difference between imperial and metric units is where they are commonly used. In the United States, imperial units are used for most everyday purposes, whereas almost everywhere else in the world, metric system units are more common.
