Technology and Safety of Marine Systems J. Wang, 2003-07-22 Traditionally society has regulated hazardous industries by detailed references to engineering codes standards and hardware requirements These days a risk based approach is adopted Risk analysis involves identifying hazards categorizing the risks and providing the necessary decision support to determine the necessary arrangements and measures to reach a safe yet economical operating level When adopting such an approach the abundance of techniques available to express risk levels can often prove confusing and inadequate This highly practical guide to safety and risk analysis in Marine Systems not only adds to the current techniques available but more importantly identifies instances where traditional techniques fall short Uncertainties that manifest within risk analysis are highlighted and alternative solutions presented In addition to risk analysis techniques this book addresses influencing elements including reliability Maintenance Decision making and Human error The highly practical approach of this title ensures it is accessible to the widest possible audience

Lihshing Leigh Wang Edmundas Kazimieras Zavadskas **Perceptual Computing** Jerry Mendel, Dongrui Wu, 2010-07-16 Explains for the first time how computing with words can aid in making subjective judgments Lotfi Zadeh the father of fuzzy logic coined the phrase computing with words CWW to describe a methodology in which the objects of computation are words and propositions drawn from a natural language Perceptual Computing explains how to implement CWW to aid in the important area of making subjective judgments using a methodology that leads to an interactive device a Perceptual Computer that propagates random and linguistic uncertainties into the subjective judgment in a way that can be modeled and observed by the judgment maker This book focuses on the three components of a Perceptual Computer encoder CWW engines and decoder and then provides detailed applications for each It uses interval type 2 fuzzy sets IT2 FSs and fuzzy logic as the mathematical vehicle for perceptual computing because such fuzzy sets can model first order linguistic uncertainties whereas the usual kind of fuzzy sets cannot Drawing upon the work on subjective judgments that Jerry Mendel and his students completed over the past decade Perceptual Computing shows readers how to Map word data with its inherent uncertainties into an IT2 FS that captures these uncertainties Use uncertainty measures to quantify linguistic uncertainties Compare IT2 FSs by using similarity and rank Compute the subsethood of one IT2 FS in another such set Aggregate disparate data ranging from numbers to uniformly weighted intervals to nonuniformly weighted intervals to words Aggregate multiple fired IF THEN rules so that the integrity of word IT2 FS models is preserved Free MATLAB based software is also available online so readers can apply the methodology of perceptual computing immediately and even try to improve upon it Perceptual Computing is an important go to for researchers and students in the fields of artificial intelligence and fuzzy logic as well as for operations researchers decision makers psychologists computer scientists and computational intelligence experts OTS. Volume 5)** Florentin Smarandache, Jean Dezert, Albena Tchamova, 2023-12-27 This fifth volume on Advances and Applications of DSMT for Information Fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics and is available in open access The collected contributions of this volume have either been

published or presented after disseminating the fourth volume in 2015 available at fs.unm.edu/DSmT_book4.pdf or www.onera.fr/sites/default/files/297_2015_DSMT_Book4.pdf in international conferences seminars workshops and journals or they are new. The contributions of each part of this volume are chronologically ordered. First Part of this book presents some theoretical advances on DSmT dealing mainly with modified Proportional Conflict Redistribution Rules PCR of combination with degree of intersection coarsening techniques interval calculus for PCR thanks to set inversion via interval analysis SIVIA rough set classifiers canonical decomposition of dichotomous belief functions fast PCR fusion fast inter criteria analysis with PCR and improved PCR5 and PCR6 rules preserving the quasi neutrality of quasi vacuous belief assignment in the fusion of sources of evidence with their Matlab codes. Because more applications of DSmT have emerged in the past years since the apparition of the fourth book of DSmT in 2015 the second part of this volume is about selected applications of DSmT mainly in building change detection object recognition quality of data association in tracking perception in robotics risk assessment for torrent protection and multi criteria decision making multi modal image fusion coarsening techniques recommender system levee characterization and assessment human heading perception trust assessment robotics biometrics failure detection GPS systems inter criteria analysis group decision human activity recognition storm prediction data association for autonomous vehicles identification of maritime vessels fusion of support vector machines SVM Silx Furtif RUST code library for information fusion including PCR rules and network for ship classification. Finally the third part presents interesting contributions related to belief functions in general published or presented along the years since 2015. These contributions are related with decision making under uncertainty belief approximations probability transformations new distances between belief functions non classical multi criteria decision making problems with belief functions generalization of Bayes theorem image processing data association entropy and cross entropy measures fuzzy evidence numbers negator of belief mass human activity recognition information fusion for breast cancer therapy imbalanced data classification and hybrid techniques mixing deep learning with belief functions as well. We want to thank all the contributors of this fifth volume for their research works and their interests in the development of DSmT and the belief functions. We are grateful as well to other colleagues for encouraging us to edit this fifth volume and for sharing with us several ideas and for their questions and comments on DSmT through the years. We thank the International Society of Information Fusion www.isif.org for diffusing main research works related to information fusion including DSmT in the international fusion conferences series over the years. Florentin Smarandache is grateful to The University of New Mexico U S A that many times partially sponsored him to attend international conferences workshops and seminars on Information Fusion. Jean Dezert is grateful to the Department of Information Processing and Systems DTIS of the French Aerospace Lab Office National d E tudes et de Recherches Ae rospatiales Palaiseau France for encouraging him to carry on this research and for its financial support. Albena Tchamova is first of all grateful to Dr Jean Dezert for the opportunity to be involved during more than 20 years to follow and share his
