### **An Analysis of Michael R. Gottfredson and Travis Hirschi's A General Theory of Crime** William

Jenkins, 2017-07-05 Michael R Gottfredson and Travis Hirschi s 1990 A General Theory of Crime is a classic text that helped reshape the discipline of criminology It is also a testament to the powers of clear reasoning and interpretation In critical thinking terms reasoning is all about presenting a solid and persuasive case and as many people instinctively understand the most persuasive reasoning is that which bases itself on a single simple hook In Gottfredson and Hirschi s case this hook was what has come to be known as the self control theory of crime the idea that the tendency to commit crime is directly related to an individual s level of self control While the dominant schools of thought of the time tended to focus on crime as the product of complex environmental factors with little attempt to unify different theories Gottfredson and Hirschi sought to interpret things so as to provide a single overarching concept that explained why crimes of all sorts were committed Moreover while other theories of crime concentrated on understanding and explaining specific types of law breaking the self control model could in Gottfredson and Hirschi s view be seen as the basis for understanding the root cause for all crime in all contexts While such simplicity inevitably attracted as much criticism as agreement subsequent studies have provided real world corroboration for the General Theory s persuasive reasoning

### **A General Theory of Crime** Michael R.

Gottfredson, Travis Hirschi, 1990 By articulating a general theory of crime and related behavior the authors present a new and comprehensive statement of what the criminological enterprise should be about They argue that prevalent academic criminology whether sociological psychological biological or economic has been unable to provide believable explanations of criminal behavior The long discarded classical tradition in criminology was based on choice and free will and saw crime as the natural consequence of unrestrained human tendencies to seek pleasure and to avoid pain It concerned itself with the nature of crime and paid little attention to the criminal The scientific or disciplinary tradition is based on causation and determinism and has dominated twentieth century criminology It concerns itself with the nature of the criminal and pays little attention to the crime itself Though the two traditions are considered incompatible this book brings classical and modern criminology together by requiring that their conceptions be consistent with each other and with the results of research The authors explore the essential nature of crime finding that scientific and popular conceptions of crime are misleading and they assess the truth of disciplinary claims about crime concluding that such claims are contrary to the nature of crime and interestingly enough to the data produced by the disciplines themselves They then put forward their own theory of crime which asserts that the essential element of criminality is the absence of self control Persons with high self control consider the long term consequences of their behavior those with low self control do not Such control is learned usually early in life and once learned is highly resistant to change In the remainder of the book the authors apply their theory to the persistent problems of criminology Why are men adolescents and minorities more likely than their counterparts to

commit criminal acts What is the role of the school in the causation of delinquency To what extent could crime be reduced by providing meaningful work Why do some societies have much lower crime rates than others Does white collar crime require its own theory Is there such a thing as organized crime In all cases the theory forces fundamental reconsideration of the conventional wisdom of academicians and criminal justice practitioners The authors conclude by exploring the implications of the theory for the future study and control of crime

*Out of Control* Erich Goode, 2008 A supplemental textbook that examines the self control theory of crime from a range of perspectives both supportive and critical

*Social Learning Theory and the Explanation of Crime* Ronald L. Akers, Gary F. Jensen, 2011-12-31 Social learning theory has been called the dominant theory of crime and delinquency in the United States yet it is often misrepresented This latest volume in the distinguished *Advances in Criminological Theory* series explores the impact of this theory Some equate it with differential association theory Others depict it as little more than a micro level appendage to cultural deviance theories There have been earlier attempts to clarify the theory's unique features in comparison to other theories and others have applied it to broader issues These efforts are extended in this volume which focuses on developing applying and testing the theory on a variety of criminal and delinquent behavior It applies the theory to treatment and prevention moving social learning into a global context for the twenty first century This comprehensive volume includes the latest work tests and theoretical advances in social learning theory and will be particularly helpful to criminologists sociologists and psychologists It may also be of interest to those concerned with current issues relating to delinquency drug use abuse and drinking alcohol abuse

**Self-control and Criminal Opportunity** Douglas Longshore, Rand Corporation, RAND Drug Policy Research

Center, National Institute on Drug Abuse, Ford Foundation, 1998 The general theory of crime Gottfredson and Hirschi 1990 proposes that self control is the primary individual level cause of crime and that its effect is contingent on criminal opportunity This study conducted a prospective test of self control and opportunity as predictors of property crime and personal crime among drug using offenders Each predictor had a main effect property crimes and personal crimes were more frequent among offenders lower on self control and those with higher opportunity A significant interaction between these predictors was also detected About four percent of the variance in each type of crime was explained by these predictors Results support the proposition that self control is a causal factor in criminal behavior and suggest that its effect is partially contingent on opportunity but self control and opportunity as measured here had very modest explanatory power
