Genetics And Insurance:

Genes and Insurance Marcus Radetzki, Marian Radetzki, Niklas Juth, 2003-11-06 The result of two key social developments in recent years are examined here the partial dismantling of the welfare state and the progress of genetics Genetic insights are increasingly valuable for risk assessment and insurers would like to use these insights to help determine premiums Combined with the fact that social welfare is being curtailed this could potentially create an uninsured high risk population Along with considerations of autonomy and privacy this is the basis for an ethical critique of insurer's access to information The result has often been regulation of such information but the authors argues that due to adverse selection regulation will not solve these problems and this may jeopardize the survival of private personal insurance Instead we should look towards the resurrection of social insurance a key component of the welfare state This will interest academic researchers as well as professionals involved with genetics and insurance Genetics and Life Insurance Mark A. Rothstein, 2004 Experts discuss the economic legal and social issues surrounding the use of genetic testing in determining eligibility for life insurance Insurance companies routinely use an individual's medical history and family medical history in determining eligibility for life insurance this is part of the process of medical underwriting Insurers have also long used genetic information often derived from family history in underwriting But rapid advances in gene identification and genetic testing are changing the way we look at genetic information Should the results of genetic testing which might identify a predisposition toward disease not related to medical history be available to life insurance medical underwriters Few if any life insurers currently require genetic testing but there are no laws or regulations prohibiting its use Genetics and Life Insurance examines the complex economic legal and social issues surrounding the use of genetic information in life insurance underwriting The contributors are legal scholars representatives of the life insurance industry including an actuary and an insurance physician a geneticist a genetic counselor a philosopher and a consumer advocate They explore all aspects of an issue that has only recently drawn the attention of policymakers and the public The book opens with a report on the results of a public opinion poll on genetics and life insurance Succeeding chapters present the insurer perspective a discussion of the economics of risk selection in life insurance background information on the process of underwriting a scientific analysis of genetic risks and mortality rates a philosophical discussion of fairness and genetic underwriting the viewpoints of consumers and genetics counselors a comparison of different international policy approaches to the issue and a legal analysis of antitrust implications when insurers collaborate in setting standards for medical underwriting In the final chapter the editor addresses various policy options examining the pros and cons of each one and assessing their political feasibility

Genetics and Insurance Alexander Morgan Capron, 2013 While the right to privacy is not a single concept many disparate aspects coalesce in a basic interest all persons have in controlling the direction and content of their lives the way in which they experience their lives and the way in which their lives are perceived by others This interest in self determination

which serves important social interests finds strong support in common and constitutional law subject to limitations imposed in the name of a free press Obtaining and using information about our genetic make up implicates the right of privacy both because a deterministic view of the findings from genetic tests may undermine our exercise of self authorship and because access by others such as insurance companies to such data like access to other medical information alters how they regard and treat us While gene testing is unlikely to play a role in most health insurance for practical as well as principled reasons companies issuing life insurance policies may face competitive pressures to obtain and use the results of the growing number of gene tests Several states have taken steps to restrict insurers ability to use genetic information in reviewing applications It seems justifiable to prevent insurers from mandating that applicants undergo genetic screening at least on an interim basis when such data are of dubious actuarial significance and trench so deeply on important individual interests in privacy but as more validated that is nonexperimental gene tests become available insurers will need to obtain and use any test results possessed by applicants

Compiled by a well known and respected team of editors and contributors from interdisciplinary backgrounds this book has its origins in the Euroscreen project a research project funded by the European Commission to examine the legal and ethical issues arising from the use of genetic testing and screening since 1990 Contributors from members of a sub group look at the likely impact of genetic testing on insurance It will be published at a point when the significant controversy surrounding this issue will have intensified throughout the European Union Although taking a European perspective it addresses US issues where there is a strong interest in comparative legislative strategies taking a themed approach this book looks comprehensively at the basis issues with an analytical rather than a descriptive approach

Great Britain. Parliament. House of Commons. Science and Technology Committee,Great Britain. Parliament. House of Commons. Select Committee on Science and Technology,2001 In 1995 the Science and Technology Committee published a wide ranging inquiry into Human Genetics and expressed concern about the use of genetic test results by insurance companies HC 41 I Session 1994 95 Since then many insurance companies have continued to use genetic test results and so this report looks at the relevance and reliability of such tests and the wider consequences for research and patient care One of its conclusions is that there should be a voluntary moratorium for the next two years During this time research should be done to establish the actuarial and scientific relevance of genetic tests to the assessment of premiums and wider healthcare issues
