*Water's Flow of Peace* Luis Antonio Bittar Venturi, 2020-03-10 This book presents the results of research cooperation between the Departments of Geography of the University of S o Paulo the University of Damascus and the University of Cambridge It serves to refute the widely spread Malthusian paradigm which forecasts conflicts due to water scarcity by showing that this perspective has neither an empirical nor conceptual basis It begins from the hypothesis that both sharing water politics and the use of technology can annul the water scarcity conflict paradigm To corroborate this hypothesis the book uses two variables illustrated by two contexts the Euphrates River basin was utilised to study the first variable of the hypothesis sharing water and to show that agreements on international river basins have assured fair use of

water by avoiding conflicts not only in the Middle East but also in the vast majority of international basins throughout the world. The second context, the Persian Gulf and Arab Peninsula, was used to corroborate the second variable of the hypothesis: the use of technology to assure water supply again not only in the Middle East but all over the world as well.

*Tratado de geografía humana* Georges Bertrand, 2006. Balance y evaluación crítica de las teorías y escuelas desarrolladas en los diversos campos de la Geografía Humana contemporánea desde una perspectiva socio-cultural. La obra recorre tanto los campos tradicionales de la Geografía Humana: la geografía rural, regional o urbana, como otros campos emergentes como la geografía de las religiones, ciberespacio, vida cotidiana, turismo, entre muchos otros. Obra de referencia innovadora en el conocimiento geográfico.

**Air Quality in the Mexico Megacity** L. Molina, 2012-12-06. In this book, experts in atmospheric sciences, human health, economics, social and political sciences contribute to an integrated assessment of the complex elements needed to structure air quality policy in the 21st century. The analysis is developed through a case study of the Mexico City Metropolitan Area, one of the world's largest megacities in which air pollution grew unchecked for decades. The international research team is led by Luisa T and Mario J Molina, Nobel Laureate in Chemistry. Improvements in Mexico City's air quality in the last decade testify to the power of determined and enlightened policy making and throw into relief the tough problems that remain to be solved. The volume's first six chapters, including the contributions of over 50 distinguished scholars from Mexico and the US, outline the fundamental areas of knowledge policy makers must accommodate. The message is that only good science and well-chosen technologies can direct the way to corrective regulatory measures, but without strong commitment from government, no amount of science or technology can help.
