The Design of Design Frederick P. addresses the design process as it has evolved today including new issues and opportunities that accompany team based and distributed design of complex systems Drawing on the experiences and intuitions of dozens of exceptional designers Brooks argues convincingly that better outcomes now require bolder design decisions Brooks shares new important insights about constraints budgets design empiricism aesthetics and style tools and more including two powerful essays on what makes designers great and where great designers come from The book concludes with six case study trips through design spaces ranging from beach houses to IBM s Operating System 360 the project that made Brooks famous some four decades ago

Artificial Intelligence in Design '98 John S. Gero, Fay Sudweeks, 2012-12-06 The development of computational models of design founded on the artificial intelligence paradigm has provided an impetus for much of current design research As artificial intelligence has matured and developed new approaches so the impact of these new approaches on design research has been felt This can be seen in the way concepts from cognitive science has found their way into artificial intelligence and hence into design research And also in the way in which agent based systems are being incorporated into design systems In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science Whereas a number of years ago the focus was largely on applying artificial intelligence to designing as an activity thus treating designing as a form of problem solving today we are seeing a much wider variety of conceptions of the role of artificial intelligence in helping to model and comprehend designing as a process Thus we see papers in this volume which have as their focus the development or implementation of frameworks for artificial intelligence in design attempting to determine a unique locus for these ideas We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm often the foundations come from cognitive studies of human designers **Look Both**
