

In what ways are global cities "global"? That is, in what ways do they reflect and represent global phenomena and processes?

Global cities are considered "global" in several ways. One way is that they are major centers of economic activity, with a high concentration of international businesses and financial institutions. They also tend to be hubs for international trade and transportation, connecting different regions of the world. Another way is that they are diverse and cosmopolitan, with large populations of immigrants and expatriates from around the world. They also tend to be major cultural centers, with a diverse range of cultural institutions and events. Additionally, Global Cities are often considered as the main gatekeepers of Global Governance, in that they tend to host the headquarters of international organizations and host high-level global conferences and summits. Furthermore, Global Cities are also considered as global in the sense that they tend to have a high degree of global interconnectedness and interdependence, with the decisions and actions of their residents, firms and governments having a significant impact on the rest of the world.

Apart from being "control centers" and "focal points" of global capitalism, global cities also harbor challenges to its logic and its global domination. Provide some contemporary examples.

Yes, global cities often serve as "control centers" and "focal points" of global capitalism, but they also harbor challenges to its logic and its global domination. Some contemporary examples include:

1. **Social and economic inequality:** Global cities often have large disparities in wealth and access to resources between different groups of residents, leading to social and economic inequality. Activists and organizations in global cities often work to address these inequalities and push for more equitable distribution of resources.

2. **Resistance to gentrification:** Global cities often see rapid redevelopment and gentrification, which can displace long-time residents and small businesses. Activists in global cities often organize to resist these changes and push for policies that protect affordable housing and preserve community character.

3. **Environmental justice:** Global cities are major contributors to climate change and air pollution. Activists and organizations in global cities often work to promote sustainable development and push for policies that reduce the environmental impact of urbanization.

4. **Labor rights and worker's rights:** Global cities are often home to major industries, with a large number of low-paid workers, and labor rights and worker's rights are often compromised. Activists and organizations in global cities often work to improve working conditions and raise wages for these workers.

5. **Immigration rights:** Global Cities are often the gatekeepers of nations, and as such, they tend to be the first point of contact for immigrants and asylum seekers. Activists and organizations in global cities often work to support and advocate for the rights of immigrants and asylum seekers.

These examples are not exhaustive and are subject to change based on the context and the global city in question, but they are some of the ways in which global cities reflect and challenge the logic and domination of global capitalism.

Why do Florida (2006) and Moretti (2012) argue that "geography has not died" in spite of the universal reach of Internet connectedness and that being in a certain place is as important as ever?

Florida (2006) and Moretti (2012) argue that "geography has not died" in spite of the universal reach of Internet connectedness because physical location and proximity continue to play a critical role in economic, social and cultural interactions. They argue that the Internet has made it possible for people to connect with each other regardless of physical location, but it has not eliminated the importance of physical proximity.

Florida argues that the concentration of talented and creative people in certain geographic areas, often referred to as "creative class", is still a key driver of economic growth and innovation. He argues that the Internet has made it possible for creative people to collaborate and connect with each other regardless of location, but it has not eliminated the need for them to be physically close to each other in order to share ideas, knowledge and resources.

Moretti also argues that geography is still an important factor in economic development and innovation, even in the era of the Internet. He argues that the Internet has made it possible for firms to outsource certain tasks and access global markets, but it has not eliminated the importance of location in terms of access to resources and customers. He argues that the location of firms and industries continues to play a critical role in the economy, and that the Internet has not eliminated the need for firms to be located in certain geographic areas.

In summary, both Florida and Moretti argue that even though the Internet has made it possible to connect with people and resources regardless of physical location, it has not eliminated the importance of physical proximity and location. They argue that geography is still an important factor in economic growth, innovation and human interactions.
