

Philosophical Method and Main Branches of Philosophy

Topic: Philosophy | Words: 574 | Pages: 2

All scientific disciplines require sets of rules and laws, called methods, which are based on critical thinking and are essential for any research. Philosophy is not an exception here; the only difference is that while such sciences as mathematics and physics deal with specific fields of study, philosophy seeks to answer questions that are mostly universal. Philosophy is "about fundamental ideas, those upon which other ideas depend" (Vaughn 27); naturally, philosophical thinking is inherent to any human, since it helps to act consciously in day-to-day life. The science cannot provide one with a set of knowledge; instead, it can grant tools to approach the most topical questions in anyone's life from different angles such as who I am and why I exist. Thus, philosophical thinking can be characterized by questioning, reasoning, comparing aimed at attaining an answer to a specific question or solving a particular problem.

As for me, it is an inescapable part of my life, I can present numerous instances of using a philosophical method, but I will give one that is more recent. Several months ago, while browsing the internet, I came across a page of a shelter which housed stray cats. Nothing unusual, but then I read one of their posts, which said that for the price of a cup of coffee I could cover three days of expenses for one cat, and it struck me. It made me think about the practical value of this simple cup of coffee I buy each morning. Suddenly, I realized that something that meant nothing to me could mean so much for an animal, already in a dire situation. I instantly sent them my \$5 and signed up for a monthly donation, and I can say that this is one of my best decisions.
