A Text Book In Basic Thermo / Fluid Dynamics Mohammad R. a. Shaalan, Mohammad A. Saleh, Saeed A.A. Ibrahim, Mohammad A.M. Elhady, 2022-04-19 It is recognized that the study of mechanical engineering is built of a number of engineering sciences some of which are of basic nature whereas some other are of applied nature Basic Thermodynamics and Basic Fluid Dynamics are probably the two most important basic engineering sciences in the build of a Mechanical Power Engineer In applied mechanical power engineering sciences the principles introduced and analysed in these two basic sciences are common divisors In other words we may look at these two branches of basic engineering sciences as two legs on which Mechanical Power Engineering applications appear to stand The science of Basic Thermodynamics is based mainly on a number of basic principles in the form of laws that lead to a number of equations describing and governing the behavior of several mechanical power systems It is therefore of particular importance to introduce and analyse such equations It is also essential to relate these principles and equations to each other and whenever possible to pertinent phenomena and applications This may be achieved via worked examples that stem from from engineering practice The science of Basic Fluid Dynamics is another basic engineering science of equal importance to Basic Thermodynamics The principles introduced and analysed by this basic science find applications in almost all applied mechanical power engineering sciences Examples of these applied sciences are Applied Thermodynamics Applied Fluid Dynamics Combustion Engineering Turbo machinery Refrigeration and Air conditioning Power Plants Gas dynamics Propulsion systems etc Because of the close inter relation between the science of basic thermodynamics and the science of basic fluid dynamics it has become a common practice to contained both sciences in one textbook under the title Basic Thermo fluid Dynamics the title of the present textbook The present textbook on Basic Thermo fluid Dynamics has been divided into distinct parts A and B In part A we concentrate on Basic Thermodynamics attempting to present with as much clarity as possible the basic principles therein and giving several worked examples for the sake of clarification In part B we concentrate on Basic Fluid Dynamics applying the same philosophy as in Part A In this part also a special section in chapter five containing a rather concise manipulation of the applied science of Compressible Fluid Gas Dynamics is presented being an important combined application of the basic principles discussed in thermodynamics and fluid dynamics Moreover It was felt by the authors that it is particularly important to include this

section on gas dynamics since in spite of being applied in nature it is regarded by many as basic more than applied The last chapter of Part A and chapter five of Part B cover some important engineering applications of the principles given a priori Each of these applications may be looked upon as a brief exposition of an applied engineering science carrying the title of the application under consideration This was felt imperative to the advantage hopefully to be gained by the student The authors are indebted to their colleague Dr Mohammad S H Emeara of the Mechanical Power Engineering Department Zagazig University for assisting with part of the illustrations and wish to thank him for rendering this assistance in the early stages of preparation of this textbook

Journal of Basic Engineering ,1971 **Principles of Heating, Ventilation, and Air Conditioning in Buildings** John W. Mitchell,James E. Braun,2012-03-06 Principles of HVAC in Buildings by J W Mitchell and J E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior The examples end of chapter problems and design projects are more than exercises they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment Coverage of material applicable to the field is broad a Fundamentals section on thermodynamics fluid flow heat transfer and psychrometrics types of HVAC systems and components comfort and air quality criteria a Loads section on weather data processing design heating and cooling loads an Equipment section on air and water distribution systems heating and cooling coils cooling towers refrigeration equipment and a Design and Control section on seasonal energy use control techniques supervisory control the HVAC design process and the rules of thumb often used in design The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings In addition there is extensive supplemental on line material that provides more in depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers
