Halides Diffusion-Data Compilation David Fisher, 2000-05-16 Halides continue to be an increasingly important industrial engineering resource as electrolytes and in heat treatment baths on the one hand and as the basis of exotic devices in the fields of optics electronics etc on the other At both of these extremes the gross or detailed movements of ions respectively are important factors There may also be an important geological need for a knowledge of halide diffusion data in an era when the migration or not of various waste materials including nuclear through natural seams of halide based minerals is of great concern **DDF Vol. 3: Diffusion Data: A Continuous Compilation of New Reference Data** Trans Tech Publications, Limited, 1969-01-01 on Diffusion Processes in Inorganic Solids and their Melts **DDF Vol. 7: Diffusion Data: A Continuous Compilation of New Reference Data** Trans Tech Publications, Limited, 1973-01-01 on Diffusion Processes in Inorganic Solids and their Melts **DDF Vol. 4: Diffusion Data: A Continuous Compilation of New Reference Data** Trans Tech Publications, Limited, 1970-01-01 on Diffusion Processes in Inorganic Solids and their Melts Diffusion in Halides D. J. Fisher, 2014 The present issue comprises a compilation of data on diffusion in halides in either the crystalline or molten state that is diffusion in aqueous systems is not covered The data cover a period of almost 50 years from 1965 to the beginning of 2014 The over 700 entries 205 tables and 34 figures will provide an invaluable wealth of information on diffusion in this class of material **Kinetics in Materials Science and Engineering** Dennis W. Readey, 2017-01-27 A pedagogical gem Professor Readey replaces black box explanations with detailed insightful derivations A wealth of practical application examples and exercise problems complement the exhaustive coverage of kinetics for all material classes Prof Rainer Hebert University of Connecticut Prof Readey gives a grand tour of the kinetics of materials suitable for experimentalists and modellers In an easy to read and entertaining style this book leads the reader to fundamental model based understanding of kinetic processes critical to development fabrication and application of commercially important soft polymers biomaterials hard ceramics metals and composite materials It is a must have for anyone who really wants to understand how to make materials and how they will behave in service Prof Bill Lee Imperial College London Fellow of the Royal Academy of Engineering A much needed text filling the gap between an introductory course in materials science and advanced materials specific kinetics courses Ideal for the undergraduate interested in an in depth study of kinetics in materials Prof Mark E Eberhart Colorado School of Mines This book provides an in depth introduction to the most important kinetic concepts in materials science engineering and processing All types of materials are addressed including metals ceramics polymers electronic materials biomaterials and composites The expert author with decades of teaching and practical experience gives a lively and accessible overview explaining the principles that determine how long it takes to change material properties and make new and better materials The chapters cover a broad range of topics extending from the heat treatment of steels the processing of silicon integrated microchips and the production of cement to the movement of

drugs through the human body The author explicitly avoids black box equations providing derivations with clear explanations

*Advances in Corrosion Science and Technology* Mars G. Fontana, Roger W. Staehle, 2012-12-06 This series was organized to provide a forum for review papers in the area of corrosion The aim of these reviews is to bring certain areas of corrosion science and technology into a sharp focus The volumes of this series are published approximately on a yearly basis and each contains three to five reviews The articles in each volume are selected in such a way as to be of interest both to the corrosion scientists and the corrosion technologists There is in fact a particular aim in juxtaposing these interests because of the importance of mutual interaction and interdisciplinarity so important in corrosion studies It is hoped that the corrosion scientists in this way may stay abreast of the activities in corrosion technology and vice versa In this series the term corrosion is used in its very broadest sense It includes therefore not only the degradation of metals in aqueous environment but also what is commonly referred to as high temperature oxidation Further the plan is to be even more general than these topics the series will include all solids and all environments Today engineering solids include not only metals but glasses ionic solids polymeric solids and composites of these Environments of interest must be extended to liquid metals a wide variety of gases nonaqueous electrolytes and other non aqueous liquids Diffusion Data, 1973 **Mass Transport in Oxides** J. Slifkin, 1972 Volume 1 of Point Defects in Solids has as its major emphasis defects in ionic solids Volume 2 now extends this emphasis to semiconductors The first four chapters treat in some detail the creation kinetic behavior interactions and physical properties of both simple and composite defects in a variety of semiconducting systems Also included as in Vol 1 are chapters on special topics namely phonon defect interactions and defects in organic crystals Defect behavior in semiconductors has been a subject of considerable interest since the discovery some twenty five years ago that fast neutron irradiation profoundly affected the electrical characteristics of germanium and silicon Present day interest has been stimulated by such semiconductor applications as solar cell power plants for space stations and satellites and semiconductor particle and gamma ray detectors since in both radiation damage can cause serious deterioration Of even greater practical concern is the need to understand particle damage in order to capitalize upon the developing technique of ion implantation as a means of device fabrication Although the periodic international conferences on radiation effects in semiconductors have served the valuable function of summarizing the extensive work being done in this field these proceedings are much too detailed and lack the background discussion needed to make them useful to the novice Encyclopedia of Materials K.
