Fragile Dominion Complexity And The Commons:

Fragile Dominion Simon Levin, 1999-06-03 How the science of complexity can help save the natural world from collapse

Fragile Dominion: Complexity and the Commons Simon A Levin, 2000 **The Drama of the Commons** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, 2002-02-15 The tragedy of the commons is a central concept in human ecology and the study of the environment It has had tremendous value for stimulating research but it only describes the reality of human environment interactions in special situations Research over the past thirty years has helped clarify how human motivations rules governing access to resources the structure of social organizations and the resource systems themselves interact to determine whether or not the many dramas of the commons end happily In this book leaders in the field review the evidence from several disciplines and many lines of research and present a state of the art assessment They summarize lessons learned and identify the major challenges facing any system of governance for resource management They also highlight the major challenges for the next decade making knowledge development more systematic understanding institutions dynamically considering a broader range of resources such as global and technological commons and taking into account the effects of social and historical context This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers

Policy Integration for Complex Environmental Problems Helen Briassoulis, 2017-07-05 The quest for policy integration crystallized in the 1990s as awareness was growing that the current supply of narrow sectoral and little coordinated or even overlapping and conflicting policies could not cope efficiently and effectively with contemporary complex cross cutting and interdependent socio environmental problems Combining and coordinating policies properly promises to address this institutional misfit add value to policies support planning at national and sub national levels and facilitate the transition to sustainable development more generally This book proposes a comprehensive conceptualization of policy integration and negotiates pertinent theoretical methodological and applied issues from the perspective of selected EU policies rural development regional development transport social economic environmental water resources and biodiversity policy Mediterranean desertification an exceptionally complex socio environmental problem is used as an illustrative example as the idea for this book transpired while researching the topic of policy making to combat desertification in the context of MEDACTION an EU funded research project *The Systemic Turn in Human and Natural Sciences* Lucia Urbani Ulivi, 2018-12-14 This book is dedicated to the consolidation and to the expansion of theoretic systems thinking as a necessary integration of the general reductionist and analytical attitude dominant in our culture Reductionism and analytical approaches have produced significant results in many fields of contemporary knowledge giving a great contribution to relevant scientific discoveries and to their technological application but their validity has been improperly universalized as the only and best methods of knowledge in every domain It is nowadays clear that analytical or mereological approaches are

inadequate to solve many problems and that we should introduce or support the diffusion of new concepts and different research attitudes. A good candidate to support such a shift is the well known theoretical approach based on the concept of system that no more considers the elementary constituents of an object but the entity emerging from the relations and interactions among its elementary parts. It becomes possible to reconstruct several domains both philosophical and scientific from the systemic point of view introducing fresh ideas in the research in view of a general rational vision of the world on more comprehensive basis. This book contributes to the diffusion and evolution of systemic thinking by focusing on two main objectives: developing and updating the systemic approach in disciplines currently using it and introducing the systemic perspective in humanistic disciplines where the approach is not widely used.

The Systemic Turn in Human and Natural Sciences A Rock in the Pond is comprised of ten chapters. The chapter authors adopt a trans disciplinary perspective consisting in the recognition and harmonization of the special outlooks that together within the general systemic paradigm gives an ideal unity to the book.

Tourism and Resilience Susan L Slocum, Carol Kline, 2017-06-09 This is the first book to address the concept of resilience and its specific application and relevance to tourism in particular tourism destinations. Resilience relates to the ability of organisms, communities, ecosystems and populations to withstand the impacts of external forces while retaining their integrity and ability to continue functioning. It is particularly applicable to tourism destinations and attractions which are exposed to the potentially harmful and sometimes severe effects of tourism development and visitation but which also can experience increased resilience from the economic benefits of tourism. *Tourism and Resilience* is relevant for researchers, students and practitioners in tourism and related fields such as development studies, geography, sociology, anthropology, economics and business management. Phenomena such as destination communities, wildlife populations and ecosystems are discussed as well as the ability of places and communities to use tourism and its infrastructure to recover from disasters such as tsunamis, earthquakes, unrest and disease.

Integration of Nature and Technology for Smart Cities Anil Ahuja, 2016-03-17 This book is a resumption of the work *Integrated M E Design Building Systems Engineering* published by Anil Ahuja in 1997. Together with an international group of authors from the engineering, urban planning and architecture fields, Mr Ahuja discussed new trends and paradigms in the smart buildings and smart city sectors and extended the topic of the previous publication from the building to the entire city. A smart sustainable building is not just about the building itself. There are things happening in the inside of the building and on the outside. A smart building connects the inside with the outside, provides efficiencies on both sides, synchronizes the outside infrastructure with its inside systems and integrates nature and its occupants in its design. A smart building doesn't just provide technology solutions. It is about constant exchange between the inside and the outside of the building, the contribution of the building to the quality of the entire neighborhood and the rest of the city, how the smart building can connect people in a sharing community and how technology can be the key to make it happen.

Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Frontiers at the Interface of Computing and Biology, 2006-01-01 Advances in computer science and technology and in biology over the last several years have opened up the possibility for computing to help answer fundamental questions in biology and for biology to help with new approaches to computing Making the most of the research opportunities at the interface of computing and biology requires the active participation of people from both fields While past attempts have been made in this direction circumstances today appear to be much more favorable for progress To help take advantage of these opportunities this study was requested of the NRC by the National Science Foundation the Department of Defense the National Institutes of Health and the Department of Energy The report provides the basis for establishing cross disciplinary collaboration between biology and computing including an analysis of potential impediments and strategies for overcoming them The report also presents a wealth of examples that should encourage students in the biological sciences to look for ways to enable them to be more effective users of computing in their studies
