Form And Structure In Architecture The Role Of Statical Function:

Ways to Study and Research Urban, Architectural and Technical Design T.M. de Jong, D.J.M. van der Voordt, 2005-12-31
How can we develop a scientific basis for architectural urban and technical design When can a design be labelled as scientific output comparable with a scientific report What are the similarities and dissimilarities between design and empirical research and between design research typological research design study and study by design Is there a need for a particular methodology for design driven study and research With these questions in mind more than forty members of the Faculty of Architecture of the Delft University of Technology have described their ways of study and research Each chapter shows the objectives the methodology and its implementation in search for a deeper knowledge of design processes and an optimal quality of the design itself The authors among them architects urban planners social scientists lawyers technicians and information scientists have widely differing backgrounds Nevertheless they share a great deal The central focus is a better understanding of design processes design tools and the effects of design interventions on issues such as utility aesthetics meaning sustainability and feasibility

Space Syntax Laura Vaughan, John Peponis, Ruth Conroy Dalton, 2005-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology *Space Syntax Selected papers* by Bill Hillier provides a canon of works that reflects the progression of Hillier's ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier's key ideas

Statistics and Neural Networks Jim W. Kay, D. M. Titterton, 1999 Recent years have seen a growing awareness of the interface between statistical research and recent advances in neural computing and artificial neural networks This book covers various aspects of current work in the area drawing together contributions from authors who are leading researchers in the two fields Their contributions show a strong awareness of the common ground and of the advantages to be gained by taking the wider perspective Topics covered include nonlinear approaches to discriminant analysis information theoretic neural networks for unsupervised learning Radial Basis Function networks techniques for optimizing predictions approaches to the analysis of latent structure including probabilistic principal component analysis density networks and the use of multiple latent variables and a substantial chapter outlining techniques and their application in industrial case studies This research

interface is currently extremely active and this volume gives an authoritative overview of the area its current status and directions for future research *Handbook of Human Factors in Web Design* Kim-Phuong L. Vu,Robert W.

Johnson,2006-04-06 This new volume in the highly cited and critically acclaimed Attention and Performance series is the first to provide a systematic investigation of how imaging techniques can help us understand the processes of change in mental development It brings together world class scientists to address brain and cognitive development at several different levels including phylogeny genetics neurophysiology brain imaging behavior and computational modeling across both typically and atypically developing populations **Biofilms from a Food Microbiology Perspective: Structures, Functions and**

Control Strategies Avelino Alvarez-Ordóñez,Romain Briandet,2017-03-17 Materials and equipment in food processing industries are colonized by surface associated microbial communities called biofilms In these biostructures microorganisms are embedded in a complex organic matrix composed essentially of polysaccharides nucleic acids and proteins This organic shield contributes to the mechanical biofilm cohesion and triggers tolerance to environmental stresses such as dehydration or nutrient deprivation Notably cells within a biofilm are more tolerant to sanitation processes and the action of antimicrobial agents than their free living or planktonic counterparts Such properties make conventional cleaning and disinfection protocols normally not effective in eradicating these biocontaminants Biofilms are thus a continuous source of persistent microorganisms including spoilage and pathogenic microorganisms leading to repeated contamination of processed food with important economic and safety impact Alternatively in some particular settings biofilm formation by resident or technological microorganisms can be desirable due to possible enhancement of food fermentations or as a means of bioprotection against the settlement of pathogenic microorganisms In the last decades substantial research efforts have been devoted to unravelling mechanisms of biofilm formation deciphering biofilm architecture and understanding microbial interactions within those ecosystems However biofilms present a high level of complexity and many aspects remain yet to be fully understood A lot of attention has been also paid to the development of novel strategies for preventing or controlling biofilm formation in industrial settings Further research needs to be focused on the identification of new biocides effective against biofilm associated microorganisms the development of control strategies based on the inhibition of cell to cell communication and the potential use of bacteriocins bacteriocin producing bacteria phage and natural antimicrobials as anti biofilm agents among others This Research Topic aims to provide an avenue for dissemination of recent advances within the biofilms field
