Marselle, 2007 Cosmology deals with the nature of the universe It can be broadly divided into three great ages The first began in the 6th century BC with the Pythagorean concept of a spherical Earth that is part of a universe in which the motions of the planets are governed by the harmonious relations of natural laws The second began in the 16th century with the Copernican revolution This in turn led into Newton's infinite universe The third began in the early 20th century with Albert Einstein's theory of general relativity and developed into the expanding universe we know today Einstein's general theory of relativity extended the new space and time concepts of the special theory of relativity from the domain of electric and magnetic phenomena to all of physics and particularly to the theory of gravitation By building on Einstein's previous work on special relativity general relativity sought to deal with accelerating frames of reference This in turn led to the principle of equivalence By dealing with accelerating frames of reference general relativity provides astronomers with the best theory to predict the effects of gravity The book examines in detail new and important work in this field **Clusters of Galaxies and Extragalactic Radio Sources** Arkadii Dmitrievich Kuz'min, 1990 In the past few years the acquisition of new data has far outstripped theoretical advances in the study of clusters of galaxies and extragalactic radio sources two important topics in contemporary astrophysics A few of the nine papers here try to redress the balance with theoretical treatments but *Symmetries and Algebraic Structures in Physics: Quantum field theory, quantum mechanics and quantum optics* V. generation by an electromagnetic wave in a plasma are considered The theory of the nonreflective propagation of an electromagnetic wave through a dense plasma is developed The results of the nonlinear theory of fast plasma waves excitation by single and double frequency electromagnetic pulses in rare plasma are presented The method of electron acceleration by laser radiation is discussed Plasma synergetics including nonstationary structures are studied The influence of plasma motion on the generation of fast particles and harmonics is investigated It is shown that the electrical field amplitude near the critical density layer for a wave propagating towards the supersonic plasma stream is limited and it decreases with increase of plasma inhomogeneity length      Sakharov Memorial Lectures in Physics L.
