The Southern Forest Futures Project David N. Wear, 2009 The Southern Forest Futures Project has been designed to evaluate the implications of potential futures for the many goods and services forests in the Southeastern United States provide To ensure that the Futures Project is comprehensive and relevant we have begun with a thorough scoping of issues using a process that elicits input from various interested publics We have held public meetings in 14 locations around the South and through 3 online Webinars The meeting sites provided at least two public meetings in each of five ecological subregions and no fewer than one public meeting in each State We gathered 2 200 comments using a structured workshop format and processed the compiled data to define a comprehensive view of how forces of change may reshape forests and how these changes could affect the various goods services and values of forest ecosystems We also identified a set of meta issues that warrant indepth analysis to evaluate their potential influence on the future of forests These topics of concern include bioenergy climate change forest ownership change invasive species fire taxes and water The input on meta issues forces of change and resource implications will be used to organize subsequent stages of the Southern Forest Futures Project

Forecasting Forest Futures Hamish Kimmins, Juan A. Blanco, 2010-09-23 Modelling is an important tool for understanding the complexity of forest ecosystems and the variety of interactions of ecosystem components processes and values This book describes the hybrid approach to modelling forest ecosystems and their possible response to natural and management induced disturbance The book describes the FORECAST family of ecosystem management models at three different spatial scales tree stand and landscape and compares them with alternative models at these three spatial scales The book will help forest managers to understand what to expect from ecosystem based forest models serve as a tool for use in teaching about sustainability scenario analysis and value trade offs in natural resources management and assist

policy makers managers and researches working in assessment of sustainable forest management and ecosystem management Several real life examples of using the FORECAST family of models in forest management and other applications are presented from countries including Canada China Spain and the USA to illustrate the concepts described in the text The book also demonstrates how these models can be extended for scenario and value trade off analysis through visualization and educational or management games

Forest Governance and Management Across Time Erland Mårald,Camilla Sandstrom,Annika Nordin,and Others,2017-09-22 The influence of the past and of the future on current time tradeoffs in the forest arena are particularly relevant given the long term successions in forest landscapes and the hundred years rotations in forestry Historically established path dependencies and conflicts determine our present situation and delimit what is possible to achieve Similarly future trends and desires have a large influence on decision making Nevertheless decisions about forest governance and management are always made in the present in the present time appraisal of the developed situation future alternatives and in negotiation between different perspectives interests and actors This book explores historic and future outlooks as well as current tradeoffs and methods in forest governance and management It emphasizes the generality and complexity with empirical data from Sweden and internationally It first investigates from a historical perspective how previous forest policies and discourses have influenced current forest governance and management Second it considers methods to explore alternative forest futures and how the results from such investigations may influence the present Third it examines current methods of balancing tradeoffs in decision making among ecosystem services Based on the findings the authors develop an integrated approach Reflexive Forestry to support exchange of knowledge and understandings to enable capacity building and the establishment of common ground Such societal agreements or what the authors elaborate as forest social contracts are sets of relational commitment between involved actors that may generate mutual action and a common directionality to meet contemporary challenges

Forest Futures Sean Phillips (M. Arch),2018 With recent interest in carbon emissions wood has returned as a fashionable building material Renewable flexible and a carbon sink wood is increasingly seen as a material that responds to concerns of climate change However an acceptance of the Anthropocene demands a re thinking of how humans relate to natural systems and this thesis argues that with a return to wood architecture must also return to its source the forest for inspiration and sites of intervention This thesis sites itself within Mendocino National Forest in northern California As sites of both extraction and conservation National Forests are messy landscapes often overlooked in favor of their more manicured cousins National Parks National Forests are also under threat Political hostility towards public land drought and wildfire threaten northern Californian forests more than ever before 2017 like 2015 2012 2006 and 2002 has been the worst year on record for wildfire in California National Forest budgets are increasingly consumed by fire suppression and fueled by a changing climate and poor management dangerous wildfires are the new normal for California Fire the great destroyer is also a valuable ecosystem

actor Forest and Californian futures will depend on looking beyond the crisis of fire for opportunities within the fire cycle. This project proposes forest futures in three chapters each located at a point within the northern Californian mixed conifer fire cycle: fighting fire after the burn and working with fire in Mendocino National Forest, even as the least visited in California is filled with overlapping human and non-human worlds. Each chapter proposes an architectural intervention that engages the world of a forest dweller and their forest: the Conservation Tower, Burnout Lodge, and the Yule Tree Farm.

Moving forward Food and Agriculture Organization of the United Nations, 2020-09-30. The sixth edition of this biennial publication showcases the breadth of work and main achievements and partnerships of FAO Forestry in implementing the FAO Strategic Objectives as well as its linkages to the SDGs with descriptive information on project and programme delivery and funding resources. It is also intended to serve as a reference for delegates attending the 25th Session of the Committee on Forestry during discussions on programme implementation as well as a resource for new staff partners and the media to help them better understand FAO's forestry programme and its linkages with other sectors, partners, and international processes. Approximately 30 programme activities are documented with a selection of related photographs with a foreword by the Assistant Director General of Forestry.

Resource Bulletin SRS, 2006. [A Window on Tomorrow's Forests](#) Jane M. Hodgins, 2016. Begun in 2009, the Northern Forest Futures Project takes a long-term, large-scale perspective by applying scenario analyses and other forward-looking analytical tools to help society understand the magnitude and consequences of cumulative forest changes anticipated over the next 50 years. Forests in the Northeast and Midwest are not just part of the landscape; they are part of all of our lives in the form of forest industry and sustainable rural communities, jobs, investment tax base, economic activity, and outdoor recreation including hunting, birdwatching, camping, skiing, boating, and hiking. Forests give us clean water and clean air, renewable energy, and they sequester vast quantities of carbon from the atmosphere, partially offsetting carbon emissions associated with climate change. Research developed in the Northern Forest Futures Project gives forest owners, managers, and other decisionmakers information to guide sustainable management of the 174 million acres of public and private forests in the Northern United States.

Community Forestry in Canada Sara Teitelbaum, 2016-07-28. In recent decades, community forestry has taken root across Canada. Locally run initiatives are lauded as welcome alternatives to large corporate and industrial logging practices, yet little research has been done to document their tangible outcomes or draw connections between their ideals of local control, community benefit, ecological stewardship, and economic diversification and the realities of community forestry practice. This book brings together the work of over twenty-five researchers to provide the first comparative and empirically rich portrait of community forestry policy and practice in Canada. Tackling all of the forestry regions from Newfoundland to British Columbia, it unearths the history of community forestry, revealing surprising regional differences linked to patterns of policy making and cultural traditions. Case studies celebrate innovative practices in governance and ecological management while uncovering challenges related to

government support and market access The future of the sector is also considered including the role of institutional reform multiscale networks and adaptive management strategies
