Kinetic Modeling of Reactions In Foods Martinus A.J.S. van Boekel, 2008-12-18 The level of quality that food maintains as it travels down the production to consumption path is largely determined by the chemical biochemical physical and microbiological changes that take place during its processing and storage Authored by an internationally respected food quality expert *Kinetic Modeling of Reactions in Foods* demonstrates how to effectively capture these changes in an integrative fashion using mathematical models Thus kinetic modeling of food changes creates the possibility to control and predict food quality from a technological point of view Illustrating how kinetic modeling can predict and control food quality from farm to fork this authoritative resource Applies kinetic models using general chemical physical and biochemical principles Introduces Bayesian statistics in kinetic modeling virtually uncharted territory in the food science field Integrates food science kinetics and statistics to predict and control food quality attributes using computer models Uses real world examples rather than hypothetical data to illustrate concepts This essential reference is an indispensable guide to understanding all aspects of kinetic food modeling Unlike many other kinetic volumes available this book opens the door to the many untapped research opportunities in the food science realm where mathematical modeling can be applied

Management Systems in Mountainous Regions European Grassland Federation. International Symposium, 2011

Mountainous regions which cover nearly half of the continent's area are in many ways of vital importance for the European population They supply much of the continent's water are centres of biological and cultural biodiversity provide various opportunities for recreation farmers But mountainous regions are characterised by permanent natural handicaps due to topographic and climatic restrictions on economic and agricultural activity Because of the geographical constraints to farming work productivity is on average lower by 28% in mountain areas compared with less favoured areas and by 40% compared with lowlands Agriculture in mountainous regions can therefore in general not compete with agriculture in advantaged lowlands and with very few exceptions cannot hope to become competitive in adopting intensive models in response to the growing global competition Advanced Excel for Scientific Data Analysis Robert De Levie, 2008 Combining an easy going style with an emphasis on practical applications this greatly expanded second edition is remarkable in scope and coverage As reviews of the first edition noted the term advanced in the title is not used lightly Less than a third of its 700 pages are devoted to least squares analysis yet the reader will learn about many aspects of this ubiquitous method that are seldom found together in one volume multivariate and polynomial centering the statistical uncertainty in uncertainty estimates how to use the covariance singular value decomposition the pros and cons of weighted least squares moving equidistant least squares nonlinear least squares and imprecision contours There are lucid chapters on Fourier transformation convolution and deconvolution and digital simulation of ordinary differential equations A new chapter is devoted to some common but often only crudely used mathematical methods such as numerical differentiation Romberg integration and cubic spline interpolation Another new chapter shows how to use linear algebra on the spreadsheet with Volpi's extensive matrix toolbox of custom functions and macros A third newly added chapter describes how to set up the spreadsheet to make it less error prone and how to get superaccurate answers in Excel The substantially enlarged chapter on writing functions and macros now has a set of MacroMorsels to illustrate specific points that otherwise might trip up novice

programmers and a detailed description of Excel's extensive debugging tools. All this is presented in an easily digestible format illustrated with many examples from the literature and supported by a large collection of open access, i.e. fully transparent and user-modifiable custom functions and macros.
