Fledgling Years:

The Scientific Bases for the Preservation of the Hawaiian Crow National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Scientific Bases for the Preservation of the Hawaiian Crow, 1992-02-01 The Hawaiian Crow or Alala once an inhabitant of large forested areas of Hawaii is now found only in the wild in a relatively small area of the central Kona coast The decline of the Alala is part of a larger phenomenon of reduction and extinction of forest birds throughout Polynesia that has been associated with human colonization It is a symptom of underlying ecological problems In this book a committee of experts in ornithology captive propagation conservation biology population genetics and ecology analyzes existing data about the Alala and details its findings conclusions and recommendations concerning recovery efforts for this endangered bird *Snake River Birds of Prey National Conservation Area Research and Monitoring Annual Report* United States. Bureau of Land Management. Boise District Office, 1994 Bird Conservation Stanley A. work also show how the populations fit together as a community with overlapping habitat and prey needs that can put them in competition with reptiles and mammalian carnivores as well yet differ from one another in their nesting or feeding behaviors and population dynamics The work s substantive original data offer interesting comparisons between tropical and temperate zone species and provide a basis for establishing conservation measures based on firsthand research Making available for the first time new data on the biology ecology behavior and conservation of the majestic owls and raptors of the New World tropics this book will appeal to a wide ornithological readership especially the many raptor enthusiasts around the world
