**Hydrogen in Intermetallic Compounds II** Louis Schlapbach, 2006-01-21. The topic of hydrogen in an on metals and alloys is important in a number of disciplines including solid state physics, materials science, physical chemistry and energy technology. This volume treats the dynamics of hydrogen in intermetallic compounds, surface properties, kinetics and applications of metal hydrides in energy technology. In addition, selected experimental methods are described. The introductory chapter will enable non specialists to gain an overall picture of the field and to appreciate the relevant scientific issue. The companion volume *Hydrogen in Intermetallic Compounds I* was published as Vol 63 of *Topics in Applied Physics*.

**Books in Print**, 1987. **Handbook of Surfaces and Interfaces of Materials: Surface and interface analysis and properties** Hari Singh Nalwa, 2001. [Advanced Electronic Packaging](#) Richard K. Ulrich, William D. Brown, 2006-02-24. As in the First Edition, each chapter in this new Second Edition is authored by one or more acknowledged experts and then carefully edited to ensure a consistent level of quality and approach throughout. There are new chapters on passive devices, RF and microwave packaging, electronic package assembly and cost evaluation and assembly while organic and ceramic substrates are now covered in separate chapters. All the hallmarks of the First Edition which became an industry standard and a popular graduate level textbook have been retained. An Instructor's Manual presenting detailed solutions to all the problems in the book is available upon request from the Wiley Marketing Department. **Surface Analysis Methods in Materials Science** D.J. O'Connor, Brett A. Sexton, Roger St.C. Smart, 2013-04-17. The idea for this book stemmed from a remark by Philip Jennings of Murdoch University in a discussion session following a regular meeting of the Australian

Surface Science group He observed that a text on surface analysis and applications to materials suitable for final year undergraduate and postgraduate science students was not currently available Furthermore the members of the Australian Surface Science group had the research experience and range of coverage of surface analytical techniques and applications to provide a text for this purpose A list of techniques and applications to be included was agreed at that meeting The list intended readership of the book has been broadened since the early discussions particularly to encompass industrial users but there has been no significant alteration in content The editors in consultation with the contributors have agreed that the book should be prepared for four major groups of readers senior undergraduate students in chemistry physics metallurgy materials science and materials engineering postgraduate students undertaking research that involves the use of analytical techniques groups of scientists and engineers attending training courses and workshops on the application of surface analytical techniques in materials science industrial scientists and engineers in research and development seeking a description of available surface analytical techniques and guidance on the most appropriate techniques for particular applications The contributors mostly come from Australia with the notable exception of Ray Browning from Stanford University
