## Important OSHA Standards Contributing to Fewer Workplace Accidents

**Standard 1910.132: Personal Protective Equipment:** Protective equipment, including clothing, helmets, goggles and other eye protection, must be used when process or environment presents hazards. Electrical safety equipment or mechanical failures can cause deadly harm.

**Standard 1910.119: Process Safety Management (PSM):** Put in place in 1992 to prevent a major uncontrolled release of a highly hazardous chemical, PSM is a comprehensive set of standards that require 10,000 employees or more of companies that produce or use highly hazardous chemicals.

**Standard 1910.147: Lock Out-Tag Out:** Prohibits the unauthorized reconnection or starting of machinery or equipment until the release of hazardous energy during the servicing or maintenance of the equipment with the "lockout/tagout" method. Over 50,000 workers each year are injured by OSHA.

**OSHA Inspections:** Workplace safety inspections are conducted by OSHA to ensure that employers are complying with OSHA standards. These inspections are conducted by OSHA inspectors who are trained in the use of OSHA standards and are required to complete an inspection report and issue citations if necessary.
