Computational Graph Theory Gottfried Tinhofer, 1990 Graph-Theoretic Concepts in Computer Science Ludek Kucera, 2002-12-13 The 28th International Workshop on Graph Theoretic Concepts in Computer Science WG 2002 was held in Cesky Krumlov a beautiful small town in the southern part of the Czech Republic on the river Vltava Moldau June 13 15 2002 The workshop was organized by the Department of Applied Mathematics of the Faculty of Mathematics and Physics of Charles University in Prague Since 1975 WG has taken place in Germany 20 times twice in Austria and The Netherlands and once in Italy Slovakia and Switzerland As in previous years the workshop aimed at uniting theory and practice by demonstrating how graph theoretic concepts can be applied to various areas in Computer Science or by extracting new problems from applications The workshop was devoted to the theoretical and practical aspects of graph concepts in computer science and its contributed talks showed how recent research results from algorithmic graph theory can be used in computer science and which graph theoretic questions arise from new developments in computer science Altogether 61 research papers were submitted and reviewed by the program committee The program committee represented the wide scientific spectrum and in a careful reviewing process with four reports per submission it selected 36 papers for presentation at the workshop There were several comments as well as the numerous fruitful discussions during the workshop have been taken into account by the authors of these conference proceedings

Graph Theory and Complex Networks Maarten van Steen, 2010 This book aims to explain the basics of graph theory that are needed at an introductory level for students in computer or information sciences To motivate students and to show that even these basic notions can be extremely useful the book also aims to provide an introduction to the modern field of network science Mathematics is often unnecessarily difficult for students at times even intimidating For this reason explicit attention is paid in the first chapters to mathematical notations and proof techniques emphasizing that the notations form the biggest obstacle not the mathematical concepts themselves This approach allows to gradually prepare students for using tools that are necessary to put graph theory to work complex networks In the second part of the book the student learns about random networks small worlds the structure of the Internet and the Web peer to peer systems and social networks Again everything is discussed at an elementary level but such that in the end students indeed have the feeling that they

- 1 Have learned how to read and understand the basic mathematics related to graph theory
- 2 Understand how basic graph theory can be applied to optimization problems such as routing in communication networks
- 3 Know a bit more about this sometimes mystical field of small worlds and random networks

Graph-Theoretic Concepts in Computer Science Hans L. Bodlaender,2003-10-27 The 29th International Workshop on Graph Theoretic Concepts in Computer Science WG2003

washeldintheMennorodeconferenceCenterinElspeet The Netherlands

The workshop was organized by the Center for Algorithmic Systems of the Institute of Information and Computing Sciences of Utrecht University. The workshop took place June 19-21, 2003. The 72 participants of WG 2003 came from universities and research institutes from 18 different countries and several different continents. The workshop looks back at a long tradition. It was first held in 1975 and has been held 20 times in Germany, twice in Austria and once in Italy, Slovakia, Switzerland, and the Czech Republic, and has now been held for the third time in The Netherlands. The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can be applied to various areas in computer science.

It is devoted to the theoretical and practical aspects of graph concepts in computer science. The goal is to present recent research results and to identify and explore directions of future research. The talks given at the workshop showed how recent research results from algorithmic graph theory can be used in computer science and which graph theoretic questions arise from new developments in computer science. Graph Theory for Programmers Victor N. Kasyanov,Vladimir A. Evstigneev,2012-10-11 In delivering lectures and writing books we were most often forced to pay absolutely no attention to a great body of interesting results and useful algorithms appearing in numerous sources and occasionally encountered It was absolutely that most of these results would finally be forgotten because it is impossible to run through the entire variety of sources where these materials could be published Therefore we decided to do what we can to correct this situation We discussed this problem with Ershov and came to an idea to write an encyclopedia of algorithms on graphs focusing our main attention on the algorithms already used in programming and their generalizations or modifications We thought that it is reasonable to group all graphs into certain classes and place the algorithms developed for each class into a separate book The existence of trees i e a class of graphs especially important for programming also supported this decision This monograph is the first but as we hope not the last book written as part of our project It was preceded by two books Algorithms on Trees 1984 and Algorithms of Processing of Trees 1990 small editions of which were published at the Computer Center of the Siberian Division of the Russian Academy of Sciences The books were distributed immediately and this made out our decision to prepare a combined monograph on the basis of these books even stronger
