Future For European Energy Security:

European Energy Security Palgrave Macmillan,1986-02-01 *European Energy Security* Peter Truscott,2009

European Energy Security Nataliya Esakova,2013-01-24 Nataliya Esakova performs an analysis of the interdependencies and the nature of cooperation between energy producing consuming and transit countries focusing on the gas sector For the analysis the theoretical framework of the interdependence theory by Robert O Keohane and Joseph S Nye and the international regime theory are applied to the recent developments within the gas relationship between the European Union and Russia in the last decade The objective of the analysis is to determine whether a fundamental regime change in terms of international regime theory is taking place and if so which regime change explanation model in terms of interdependence theory is likely to apply *Renewed Focus on European Energy Security* United States. Congress. Senate. Committee on Foreign Relations. Subcommittee on European Affairs,2014 **European Energy Security** M. Biresselioglu,2011-06-13 An exploration of Turkey s future role and impact on European energy security looking at the connection between geopolitics energy security and the EU s need for energy The book focuses on Turkey s foreign and energy policies and importance as a natural funnel through which the EU can access hydrocarbons and renewables Energy Security and Natural Gas Markets in Europe Tim Boersma,2015-08-27 Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe **The EU-Russian Energy Dialogue** Pami Aalto,2008 EU Russian energy dialogue represents a policy issue that forces us to take a serious look at several crucial questions related to the present and future of Europe This book not only outlines the overall characteristics of the energy dialogue but also illustrates the involved policy implementation challenges by paying special attention to the regional context of northern Europe *Low-carbon Energy Security from a European*

Perspective Patrizia Lombardi, Max Gruenig, 2016-06-08 Low Carbon Energy Security from a European Perspective draws on the European Commission's funded project MILESECURE 2050. It considers low carbon energy security and energy geopolitics in Europe with a focus on four thematic clusters challenging the energy security paradigm: climate change and energy security objectives, the components of a secure and low carbon energy system, energy security in a geopolitical perspective as it relates to economics, resource competition and availability, and the influence of large scale renewable energy projects on energy security and shifting geopolitical alliances. An overarching narrative is that optimizing the energy system simultaneously across different objectives may be impossible, i.e. lowest cost, least environmental impact, minimal downtime, regional supply. This book explores these charged topics through insights from a series of novel new energy project case studies and demonstrates the need for difficult political conversations within Europe and beyond by posing fundamental yet new questions about the energy security paradigm. Offers a unique perspective on low carbon energy security by considering the assumptions behind current energy security needs. Suggests the benefit of envisioning energy security through out of the box scenario development with respect to the energy system. Includes energy in an international scenario with case studies from Africa, Russia, Ukraine, Morocco, China, South America, and Europe. Draws on the European Commission's funded project MILESECURE 2050. **The Southern Energy Corridor: Turkey's Role in European Energy Security** Vedat

Yorucu, Ozay Mehmet, 2017-10-03 This book highlights the importance of Turkey in diversifying supplies in future European energy security, focusing in particular on the rapidly emerging southern energy corridor. Turkey, by its location, occupies a key role in this corridor, fed by hydrocarbon supplies from Russian, Caspian, east Mediterranean, and Arab sources. The book examines Turkey's role as a transit country in addition to its own growing domestic energy market and it utilizes the latest evidence on the geopolitics of various pipelines which converge on Turkey. The evidence, including maps, strongly favors Turkey as an energy hub within a regional energy model driven by rational behavior and market forces. The book recommends an increasing strategic energy cooperation between the EU and Turkey to maximize mutual interest.

Investing in EU Energy Security Henrik Bjørnebye, 2010-01-01 La 4e de couverture indique Since the introduction a quarter century ago of market based investments in the production of electricity and other critical services, our awareness of the underlying issues affecting the supply and consumption of energy has changed radically. No longer can Europe or any region rely on over capacity of electricity generation and inexpensive primary energy fuels or disregard the signs of potentially catastrophic climate change. The author of this timely and sharply focused book shows that in the light of our current knowledge, ensuring new investments and the right investments in electricity generation constitutes an urgent energy policy challenge facing the EU over the coming decades. He accordingly makes the case for a serious reconsideration of the market facilitation and market intervention rules under electricity market legislation in the EU. In the first detailed legal analysis of the EU's internal electricity market framework for investments in electricity generation facilities from the

perspective of security of supply this book cover such legal issues as the following in precise detail applicability of the Treaty on the Functioning of the European Union TFEU security of supply as a ground for exemption on the basis of public security justifications of public intervention the applicability of EU State aid provisions to investments in energy security requirements imposed by EU law on Member States for ensuring cost efficient investments in European supply security facilitation of renewable energy sources and cogeneration in the environmental interest the Court of Justice s approach to Member State interventions the Court s decisions on restrictions on free movement in the environmental interest Member States right to launch tendering procedures for new generation capacity Member States right to impose public service obligations in the general economic interest on certain undertakings and relationship between the provisions of the TFEU and those of the Euratom Treaty in relation to investments in nuclear power generation Throughout the study in addition to his analysis of the decisions of the Court of Justice and the Court of First Instance the author takes into account legal literature and Union reports preparatory works and working papers The book demonstrates convincingly that today s energy supply challenges must be based on a broader balancing of security competitiveness and sustainability interests It suggests that the internal electricity market provisions of the Electricity Directive and the Security of Electricity Supply Directive would benefit from focusing more intensely on requiring investments in technologies and primary energy sources that will help mitigate climate change and reduce European energy import dependency and less on the need for ensuring cost efficient investments through market based means Through its detailed analysis of EU law in an area of great significance to both market participants and the public sector Investing in EU Energy Security will be welcomed by legal advisors whether working for the EU electricity industry or public agencies responsible for implementation of internal electricity market measures as well as by academics in this hugely important field of current research

European Energy and Climate Security Rossella Bardazzi, Maria Grazia Pazienza, Alberto Tonini, 2015-09-28 As energy is becoming one of the crucial concerns in the EU this volume provides an in depth analysis and interdisciplinary perspective on European energy security Given the multidimensional nature of energy security in terms of physical availability affordability and geopolitical security it brings together authors from different backgrounds pursuing a distinctly multidisciplinary approach The authors different perspectives correspond to the three sections of the book international relations which focuses on Eastern EU partners energy economics which highlights the current unconventional hydrocarbons revolution and its impact on EU energy and climate strategies and public policy which analyzes EU policies in the context

language English abstract The European Union aspires to be a frontrunner in the transition towards a low carbon economy Its energy policy aims at reconciling climate and environmental objectives with concerns over security of supply and competitive markets The restructuring and modernisation of the European energy system is driven by a continuous liberalisation regime in conjunction with the promotion of renewable energy sources and energy efficiency The implications of this strategy are manifold whereof the modernisation and upgrade of the electricity grid is increasingly recognized to be the quintessential prerequisite to meet tomorrow s energy challenges The emergence of the Smart Grid has enthused industry and policy makers alike as it has the potential to be the enabler for a future low carbon electricity system by facilitating demand side efficiency increasing the shares of renewables and distributed energy generation and enabling electrification of transport The European Commission views the Smart Grid as the backbone of Europe s future energy infrastructure advancing the development of green energy while making the system more stable through information and communication technologies The deployment of Smart Grid implies a technological transformation that will have a deep impact on the whole electricity value chain The thesis explores the effects of this transition process with regard to energy market liberalisation Smart Grid deployment and energy market integration We scrutinize the relationship of these three variables by considering Smart Grids as a function of liberalisation liberalisation as a function of Smart Grid deployment and last but not least market integration as a function of liberalisation and Smart Grid deployment

The future of European energy security Leszek Jesień,2006

Asia and Europe; Cooperating for Energy Security Francois Godement,Francoise Nicolas,Taizo Yakushiji,2004-07 Energy security is an issue of common concern in Asia and Europe because of broad similarities in their energy situation such as a high import dependency and dependence on the Middle East The rise in energy demand in Asia has substantially affected the global energy balance and will have obvious implications for the rest of the world and Europe in particular Energy security also exhibits to some extent the characteristics of a public good which may be usefully managed in a collective way As a result there is definitely scope for cooperation on energy issues between the countries of the two regions despite possible competing interest The major objective of the present volume is to show that broadly converging interest between the two regions on a number of energy security related issues give them a opportunity to blaze a trail and provide guidance for global governance on these matters P 4 of cover

EU Energy Roadmap 2050 Alan Riley,2012 The workshop Energy Roadmap 2050 EU External policies for future energy security organised by the Policy Department of DG External Policies for the Committee on Foreign Affairs AFET took place on November 5th 2012 in the European Parliament It aimed at facilitating an exchange of views about the energetic context and the future perspectives of the global market and European energy security The participants discussed the parameters of the international energetic scene the rise of shale gas exploitation and its economic ecological and geopolitical impacts the development of the European internal market rules the future negotiations on climate change The EU s energetic future was obviously the main topic and

was treated through the analysis of the three pillars of energy policy security of supply competitive market conditions and sustainability The accent was put on the consequences of the US s growing independency on oil and gas due to the exploitation of shale gas deposits This recent development is likely to have huge mid term repercussions on global oil coal and gas prices and to widen the competitiveness gap between the US and Europe The climate change issue and the possibility to create the conditions for a new international agreement were discussed as well as the future perspectives of renewable energy development The proficiency of the European Trading Scheme and the research on energy efficiency and carbon capture storage technology were debated The speakers also insisted on the fact that the full implementation of internal market rules would have a crucial influence on the construction process of the European energy policy They pointed out the need to strengthen and extend these norms through the development of the European Energy Community Treaty Regarding the European energy security the partnership with Russia the main supplier of many EU member states was stressed by the speakers even though one of the main objectives of the emerging European energy policy is to reduce its dependency on a single source of supply by diversifying its roads and sources of supply The participants analysed the case of the southern corridor which is seen as a viable solution so as to have a clear view of the EU s future options despite the fact that Nabucco seems to be in a stalemate Various scenarios were presented with the aim to highlight the need for a reinforcement of European solidarity through the strengthening of the internal market rules and the consolidation of integration Finally the participants called for common views and works on these issues the resolution of which is crucial for the EU s energetic future Executive summary p 6 *Arms Control and Disarmament, Defense and Military, International Security, and Peace* Stephen E.
