The Handbook of Homogeneous Hydrogenation Johannes G. de Vries, Cornelis J. Elsevier, 2007 *Enzyme Kinetics* Paul C. Engel, 2013-11-21 The student of biological science in his final years as an undergraduate and his first years as a graduate is expected to gain some familiarity with current research at the frontiers of his discipline New research work is published in a perplexing diversity of publications and is inevitably concerned with the minutiae of the subject The sheer number of research journals and papers also causes confusion and difficulties of assimilation Review articles usually presuppose a background knowledge of the field and are inevitably rather restricted in scope There is thus a need for short but authoritative introductions to those areas of modern biological research which are either not dealt with in standard introductory text books or are not dealt with in sufficient detail to enable the student to go on from them to read scholarly reviews with profit This series of books is designed to satisfy this need The authors have been asked to produce a brief outline of their subject assuming that their readers will have read and remembered much of a standard introductory textbook of biology **Mammalian Alkaline Phosphatases** José Luis Millan, 2006-02-28 A review and discussion of new knowledge on the structure and function of mammalian alkaline phosphatases APs gained over the last 25 years It covers The structure regulation and expression of the AP genes The three dimensional structure of APs and mutagenesis work that further defined the structural functional domains of the isozymes The phenotypic abnormalities of the different AP knockout mice Our current understanding of the in vivo role of the AP isozymes The book also describes the possible use of APs as therapeutic agents and therapeutic targets and the many uses of these enzymes in clinical medicine and in biotechnology **The World of the Cell** Wayne M.
