Energy Efficient Motors Reference Guide Nadi D. Sadanandan, Ahmed H. Eltom, Tennessee Valley Authority, 2005-01 Energy efficient motors are motors in which better quality parts increased conductor size higher quality steel and improved design are combined to produce motors with full load efficiencies higher than standard motors Energy efficient motors maintain high efficiency at low loads They usually have inherently higher power factors than standard motors and maintain higher power factors under partial load operations Energy efficient motor windings will generally have longer life than standard motor windings because they run cooler This motor reference guide is the result of data and information collected and organized by the Industrial and Large Commercial staff of the Tennessee Valley Authority Additionally computer simulations were performed to develop data not currently available in literature The guide is not intended to be a textbook on motors but a quick and ready reference to assist in the technical and economic evaluation of energy efficient motors versus standard motors However chapters on motor related topics such as rotating fields power factor correction and impact of power quality on motor performances have also been included to complement the text
