Stevens, 2015-01-22 From ravenous ants and temperamental gear to debilitating illness and unpredictable politics field research can be fraught with challenges and opportunities for mishap Disasters in Field Research is your guide to what can go wrong while conducting fieldwork and what you can do to avoid or minimize the impact of unexpected events Ice Dufour and Stevens address the issues confronting both students and professional researchers as they embark on field research For example permits may be difficult to obtain or even revoked at the last minute Cultural differences and misunderstandings can disrupt data collection Equipment can be held up by customs or fail to work as expected The authors offer practical advice on preparing for such possibilities while active researchers from a wide array of disciplines relate in brief first person narratives their own encounters with disaster how they solved or failed to solve the problem and their recommendations for avoiding similar issues in the future Each thematic chapter concludes with strategies and suggestions for making the most of your preparations recovering from missteps and coping with calamity The result is an excellent companion book for field methods courses in a variety of disciplines and an excellent companion to carry with you into the field **Contemporary Field Research** Robert M. been gained from the successes of randomized controlled trials stories of failed projects often do not get told In *Failing in the Field* Dean Karlan and Jacob Appel delve into the common causes of failure in field research so that researchers might avoid similar pitfalls in future work Drawing on the experiences of top social scientists working in developing countries this book delves into failed projects and helps guide practitioners as they embark on their research From experimental design and implementation to analysis and partnership agreements Karlan and Appel show that there are important lessons to be learned from failures at every stage They describe five common categories of failures review six case studies in detail and conclude with some reflections on best and worst practices for designing and running field projects with an emphasis on randomized controlled trials There is much to be gained from investigating what has previously not worked from misunderstandings by staff to errors in data collection Cracking open the taboo subject of the stumbles that can take place in the implementation of research studies *Failing in the Field* is a valuable how not to handbook for conducting fieldwork and running randomized controlled trials in development settings
