Environmental Science Methods Robin Haynes,2012-12-06 This book is an introduction to a range of methods and techniques used in the scientific study of the rocks soils atmosphere waters and living organisms of the Earth and of the relationships of these environmental factors with human activities It is intended to provide a selection of methods for students taking university courses in geography geology meteorology hydrology soil science ecology and other allied environmental sciences The contributors are all members of the School of Environmental Sciences at the University of East Anglia Norwich UK and the book has developed from part of our course for first year students It reflects our belief that students of vast complex environmental systems should begin their work with a panoramic view whatever their ultimate specialization The emphasis is therefore on breadth of treatment and on the connections between the various sciences We have summarized and simplified in order to supply a collection of methods that can be managed by a beginning student We start from basic principles and do not assume that the reader already has a strong scientific background Eleven chapters follow each dealing with a group of closely related methods and techniques They may be taken in any order although there are many cross references which demonstrate that the subjects covered are not eleven isolated techniques but a web of related principles The first three topics illustrate the point

Research Methods for Environmental Studies Mark Kanazawa,2023-07-20 The methodological needs of environmental studies are unique in the breadth of research questions that can be posed calling for a textbook that covers a broad swath of approaches to conducting research with potentially many different kinds of evidence Fully updated to address new developments such as the effects of the internet recent trends in the use of computers remote sensing and large data sets this new edition of Research Methods for Environmental Studies is written specifically for social science based research into the environment This revised edition contains new chapters on coding focus groups and an extended treatment of hypothesis testing The textbook covers the best practice research methods most used to study the environment and its connections to societal and economic activities and objectives Over five key parts Kanazawa introduces quantitative and qualitative approaches mixed methods and the special requirements of interdisciplinary research emphasizing that methodological practice should be tailored to the specific needs of the project Within these parts detailed coverage is provided on key topics including the identification of a research project hypothesis

testing spatial analysis the case study method ethnographic approaches discourse analysis mixed methods survey and interview techniques focus groups and ethical issues in environmental research Drawing on a variety of extended and updated examples to encourage problem based learning and fully addressing the challenges associated with interdisciplinary investigation this book will be an essential resource for students embarking on courses exploring research methods in environmental studies Environmental Science Methods Robin Haynes,2014-08-15 *Artificial Intelligence Methods in the Environmental Sciences* Sue Ellen Haupt,Antonello Pasini,Caren Marzban,2008-11-28 How can environmental scientists and engineers use the increasing amount of available data to enhance our understanding of planet Earth its systems and processes This book describes various potential approaches based on artificial intelligence AI techniques including neural networks decision trees genetic algorithms and fuzzy logic Part I contains a series of tutorials describing the methods and the important considerations in applying them In Part II many practical examples illustrate the power of these techniques on actual environmental problems International experts bring to life ways to apply AI to problems in the environmental sciences While one culture entwines ideas with a thread another links them with a red line Thus a red thread ties the book together weaving a tapestry that pictures the natural data driven AI methods in the light of the more traditional modeling techniques and demonstrating the power of these data based methods *Environmental Science Theory* W.T. de Groot,1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice **Environmental Science Methods** 3Island Press,1982-08-19 Secondary Environmental Science Methods Musa Y. Qutub,1973 **Methods in Sustainability Science** Jingzheng Ren,2021-08-05 *Methods in Sustainability Science* Assessment Prioritization Improvement Design and Optimization presents cutting edge detailed methodologies needed to

create sustainable growth in any field or industry including life cycle assessments building design and energy systems The book utilized a systematic structured approach to each of the methodologies described in an interdisciplinary way to ensure the methodologies are applicable in the real world including case studies to demonstrate the methods The chapters are written by a global team of authors in a variety of sustainability related fields Methods in Sustainability Science Assessment Prioritization Improvement Design and Optimization will provide academics researchers and practitioners in sustainability especially environmental science and environmental engineering with the most recent methodologies needed to maintain a sustainable future It is also a necessary read for postgraduates in sustainability as well as academics and researchers in energy and chemical engineering who need to ensure their industrial methodologies are sustainable Provides a comprehensive overview of the most recent methodologies in sustainability assessment prioritization improvement design and optimization Sections are organized in a systematic and logical way to clearly present the most recent methodologies for sustainability and the chapters utilize an interdisciplinary approach that covers all considerations of sustainability Includes detailed case studies demonstrating the efficacies of the described methods
