## **Environmental Vision:**

**Environmental Skill** Mark Coeckelbergh, 2015-02-20 Today it is widely recognized that we face urgent and serious environmental problems and we know much about them yet we do very little. What explains this lack of motivation and change? Why is it so hard to change our lives? This book addresses this question by means of a philosophical inquiry into the conditions of possibility for environmental change. It discusses how we can become more motivated to do environmental good and what kind of knowledge we need for this and explores the relations between motivation, knowledge, and modernity. After reviewing a broad range of possible philosophical and psychological responses to environmental apathy and inertia, the author argues for moving away from a modern focus on either detached reason and control (Stoicism and Enlightenment) or the natural sentiments and the authentic Romanticism, both of which make possible disengaging and alienating modes of relating to our environment. Instead, he develops the notion of environmental skill, a concept that bridges the gap between knowledge and action, reinterprets environmental virtue, and suggests an environmental ethics centered on experience, know-how, and skillful engagement with our environment. The author then explores the implications of this ethics for our lives; it changes the way we think about and deal with health, food, animals, energy, climate change, politics, and technology.

**Design for Innovative Value Towards a Sustainable Society** Mitsutaka Matsumoto, Yasushi Umeda, Keijiro Masui, Shinichi Fukushige, 2012-04-03 Since the first EcoDesign International Symposium held in 1999, this symposium has led the research and practices of environmentally conscious design of products, services, manufacturing systems, supply chain, consumption, as well as economics and society. EcoDesign 2011, the 7th International Symposium on Environmentally Conscious Design and Inverse Manufacturing, was successfully held in the Japanese old capital city of Kyoto on November 30th–December 2nd, 2011. The subtitle of EcoDesign 2011 is "to design for value innovation towards sustainable society." During this event, presenters discussed the way to achieve both drastic environmental consciousness and value innovation in order to realize a sustainable society.

**Lean and Green** Pamela J. Gordon, 2000-07-01 When it comes to believing that business can be profitable and environmentally sensitive, cynics abound on both sides. But in *Lean and Green*, Pamela Gordon proves that capitalism and environmentalism are not mutually exclusive; quite the contrary. She shows how green business practices enable organizations to save millions, even billions, of dollars each year. *Lean and Green* chronicles over one hundred examples

of how people in twenty different organizations around the world from clerks farmers and city employees to chemists and executives have strengthened environmental practices and the balance sheet She details waste saving profit building acts as basic as Linda Gee at LSI Logic digging out usable pre worn shoe covers to wear in the clean room and as broad as the city of Santa Monica paving residential streets with white top to reduce urban heat and increase surface longevity Drawing on her background as a leading business consultant Gordon shows readers precisely how to sell their environmental ideas to management She describes how to make the case in no nonsense business terms set concrete goals that the new practices will achieve measure the economic results of the new practices and make sure the right people hear about the results so that environmental initiatives continue Each chapter includes a Making It Easy list of action steps for implementing lean and green improvements in the workplace easily and immediately Lean and Green will inspire employees and employers alike to explore creative ways to simultaneously save the planet and bolster the bottom line

**Metaphors for Change** Penny Allen, Christophe Bonazzi, David Gee, 2017-09-29 How can we get from where we are to where we want to be Metaphors for Change attempts to answer this question and provide a roadmap for sustainability by bringing together the thoughts of a unique collection of leading change agents from business government and academia Environmental questions have previously been dealt with metaphorically by catastrophism or manicheism zero growth Malthusianism Deep Ecology man is the enemy less is more These metaphors have had limited impact because they have failed to connect with the mainstream of cultural political and business ideas This book examines a number of new metaphors and related partnerships tools and action which appear to have greater possibilities for the world in which we now live The editors argue that Metaphors for Change can deliver to the public and to decision makers new perceptions structured knowledge that can help interpret the past and the present and help us forge the future The wider the gap between the now and the necessary the stronger the bridging perceptions have to be in order to break through barriers of fear and conservatism Some of the concepts considered are sustainable development the polluter pays principle the precautionary principle eco efficiency eco effectiveness life cycle assessment design for the environment eco services dematerialization industrial symbiosis industrial ecology and zero emissions There are of course other useful metaphors on the horizon some of them included in this book Including key contributions from the ground breaking conferences ECO 97 and ECO 99 along with other specially commissioned and reprinted pieces Metaphors for Change provides a treasure chest of new ideas innovations and action Accessible and forward thinking it will prove indispensable both as a student learning tool and as a panoramic overview of the sustainability metaphors key thinkers believe we should be putting into practice

**Ahead of the Curve** K. Green, P. Groenewegen, P.S. Hofman, 2012-12-06 The debate on sustainable production often ends in discussions on the feasibility of far reaching changes in relation to the competitiveness of companies Industry itself and policy makers tend to back away from engaging in profound processes of industrial transformation Examples of companies

who have voluntarily moved beyond what is seen as reasonable and feasible can overcome this deadlock This book collects a fine sample of companies who have taken up their responsibility in this respect To quote the editors of this book They are cases that might provide other firms and policy makers with ideas for innovative environmental responses that are outside the slowly rising trend of improvement that we are currently observing in short the cases are of firms and ideas that are ahead of the curve The editors and many of the authors of this volume are members of the Greening of Industry Network and have been debating with one another for years Founded in 1991 the Greening of Industry Network comprises over 1500 individuals representing academia business public interest labor and government from more than 50 countries Participants work together to build policies and strategies toward creating a sustainable future through many vehicles coordinating research efforts publications planning and participating in workshops public forums and conferences To provide benefit to broader society the Network stimulates public dialogue and brings together academic researchers from many disciplines with other stakeholders who traditionally do not work together in coalitions Environmental Vision ,2015
