GIGO garbage in garage will make a mockery of those reports if you don't understand what makes up those figures Too often the input person has no idea what data they are inputting into the accounting program That might be boom time for their outside accountants that bill extra per hour to correct their input errors We don't have to revert to manual accounting but do you have to understand from the manual accounting standpoint the accounting flow The first chapter A Short History of Accounting Given this book is extremely cut and dry could be considered a waste of time but it enlightens the reader that accounting in some format is as old a civilization itself The process begins with a salaried employee launching a home based consulting business and investing in a laundromat while maintaining employment A Partner is later taken for the laundromat Both businesses started out as sole proprietorships and then were converted into Limited Partnerships and Limited Companies Then debits and credits We formed a limited company Healthy Living which sold health products over the counter and which doesn't happen in real life they offered health members and other services This was done in order to create accounting for inventory accounting for memberships and services The company is funded property acquired Fixed Assets office equipment etc Once operating sales purchases payroll receivables payables transferring funds the trial and the adjusted trial balance and transferring those figures to the financial statements There are more detailed chapters covering manufacturing cost of sales contracts and depreciation
