Formation Of Semiconductor Interfaces:

Formation of Semiconductor Interfaces Janusz Kanski, Per-Olof Nilsson, 2000 Formation Of Semiconductor Interfaces - Proceedings Of The 4th International Conference J Pollman, B Lengeler, H Luth, W Monch, 1994-06-09 Semiconductor interfaces are of paramount importance in micro nano and optoelectronics Basic as well as applied research on such systems is therefore of extremely high current interest To meet the continuous need for a better understanding of semiconductor interfaces with respect to both their fundamental physical and chemical properties as well as their applications in modern opto and microelectronics the series of international conferences on the formation of semiconductor interfaces was begun The fourth conference of the series held in Jlich addresses as main topics clean semiconductor surfaces adsorbates at semiconductor surfaces metal semiconductor insulator semiconductor and semiconductor semiconductor interfaces devices and wet chemical processes The 12 invited lectures assess the present status of the research in important areas and about 180 contributed papers describe most recent achievements in the field *Formation of Semiconductor Interfaces* Bruno Lengeler, Hans Lüth, Winfried Mönch, Johannes Pollmann, 1994 **Formation of Semiconductor Interfaces J. been achieved in the elaboration of new thin film materials and in the characterization of their interfacial properties down to the atomic scale thanks to the development of sophisticated new techniques This book is a collection of lectures that were given at the International Winter School on Semiconductor Interfaces Formation and Properties held at the Centre de Physique des Rouches from 24 February to 6 March 1987 The aim of this Winter School was to present a comprehensive review of this field in particular of the materials and methods and to formulate recommendations for future research The following topics are treated i Interface formation The key aspects of molecular beam epitaxy are emphasized as well as the fabrication of artificially layered structures strained layer superlattices and the tailoring of abrupt doping profiles ii Fine characterization down to the atomic scale using recently developed powerful techniques such as scanning tunneling microscopy high resolution transmission electron microscopy glancing incidence x ray diffraction x ray standing waves surface extended x ray absorption fine structure and surface extended energy loss fine structure iii Specific physical properties of the interfaces and their prospective applications in devices We wish to thank warmly all the lecturers and participants as well as the organizing committee who made this Winter School a success

International Conference on the Formation of Semiconductor Interfaces, 1986 **Silicon Surfaces And Formation Of Interfaces: Basic Science In The Industrial World** Jarek Dabrowski, Hans-joachim Mussig, 2000-05-25
Silicon the basic material for a multibillion dollar industry is the most widely researched and applied semiconductor and its surfaces are the most thoroughly studied of all semiconductor surfaces Silicon Surfaces and Formation of Interfaces may be used as an introduction to graduate level physics and chemical physics Moreover it gives a specialized and comprehensive description of the most common faces of silicon crystals as well as their interaction with adsorbates and overlayers This knowledge is presented in a systematic and easy to follow way Discussion of each system is preceded by a brief overview which categorizes the features and physical mechanisms before the details are presented The literature is easily available and the references are numerous and organized in tables allowing a search without the need to browse through the text Though this volume focuses on a scientific understanding of physics on the atomistic and mesoscopic levels it also highlights existing and potential links between basic research in surface science and applications in the silicon industry It will be valuable to anyone writing a paper thesis or proposal in the field of silicon surfaces
