Sing, Jens Weitkamp, 2002 Handbook of porous solids. 1 Ferdi Schüth, 2002 **Handbook of Porous Solids** Ferdi Schüth, K. S. W. Sing, Jens Weitkamp, 2002 Ordered Porous Solids Valentin Valtchev, Svetlana Mintova, Michael Tsapatsis, 2011-08-11 The developments in the area of ordered nanoporous solids have moved beyond the traditional catalytic and separation uses and given rise to a wide variety of new applications in different branches of chemistry physics material science etc The activity in this area is due to the outstanding properties of nanoporous materials that have attracted the attention of researchers from different communities However recent achievements in a specific field often remain out of the focus of collaborating communities This work summarizes the latest developments and prospects in the area of ordered porous solids including synthetic layered materials clays microporous zeolite type materials ordered mesoporous solids metal organic framework compounds MOFs carbon etc All aspects from synthesis via comprehensive characterization to the advanced applications of ordered porous materials are presented The chapters are written by leading experts in their respective fields with an emphasis on recent progress and the state of the art Summarizes the latest developments in the field of ordered nanoporous solids Presents state of the art coverage of applications related to porous solids Incorporates 28 contributions from experts across the disciplines **Contemporary Catalysis** Paul C J Kamer, Dieter Vogt, Joris W Thybaut, 2017 Providing an integrated approach to the various aspects of catalysis this textbook is ideal for graduate students from catalysis engineering and organic synthesis *Principles and Practice of Heterogeneous Catalysis* John Meurig Thomas, W. John Thomas, 2014-11-19 This long awaited second edition of the successful introduction to the fundamentals of heterogeneous catalysis is now completely revised and updated Written by internationally acclaimed experts this textbook includes fundamentals of adsorption characterizing catalysts and their surfaces the significance of pore structure and surface area solid state and surface chemistry poisoning promotion deactivation and selectivity of catalysts as well as catalytic process engineering A final section provides a number of examples and case histories With its color and numerous graphics plus references to help readers to easily find further reading this is a pivotal work for an understanding of the principles involved *Adsorption by Carbons* Eduardo J. Bottani, Juan M.D. Tascón, 2011-10-10 Adsorption by Carbons covers the most significant aspects of adsorption by carbons attempting to fill the existing gap between the fields of adsorption and carbonaceous materials Both basic and applied aspects are presented The first section of the book introduces physical adsorption and carbonaceous materials and is followed by a section concerning the fundamentals of adsorption by carbons This leads to development of a series of theoretical concepts that serve as an introduction to the following section in which adsorption is mainly envisaged as a tool to characterize the porous texture and surface chemistry of carbons Particular attention is paid to some novel nanocarbons and the electrochemistry of adsorption by carbons is also addressed Finally

several important technological applications of gas and liquid adsorption by carbons in areas such as environmental protection and energy storage constitute the last section of the book The first book to address the interplay between carbonaceous materials and adsorption Includes important environmental applications such as the removal of volatile organic compounds from polluted atmospheres Covers both gas solid and liquid solid adsorption [New Frontiers in Nanochemistry: Concepts, Theories, and Trends, 3-Volume Set](#) Mihai V. Putz,2022-05-29 New Frontiers in Nanochemistry Concepts Theories and Trends 3 Volume Set explains and explores the important fundamental and advanced modern concepts from various areas of nanochemistry and more broadly the nanosciences This innovative and one of a kind set consists of three volumes that focus on structural nanochemistry topological nanochemistry and sustainable nanochemistry respectively collectively forming an explicative handbook in nanochemistry The compilation provides a rich resource that is both thorough and accessible encompassing the core concepts of multiple areas of nanochemistry It also explores the content through a trans disciplinary lens integrating the basic and advanced modern concepts in nanochemistry with various examples applications issues tools algorithms and even historical notes on the important people from physical quantum theoretical mathematical and even biological chemistry **New Frontiers in Nanochemistry: Concepts, Theories, and Trends** Mihai Putz,2020-05-06 New Frontiers in Nanochemistry Concepts Theories and Trends Volume 2 Topological Nanochemistry is the second of the new three volume set that explains and explores the important basic and advanced modern concepts in multidisciplinary chemistry Under the broad expertise of the editor this second volume explores the rich research areas of nanochemistry with a specific focus on the design and control of nanotechnology by structural and reactive topology The objective of this particular volume is to emphasize the application of nanochemistry With 46 entries from eminent international scientists and scholars the content in this volume spans concepts from A to Z from entries on the atom bond connectivity index to the Zagreb indices from connectivity to vapor phase epitaxy and from fullerenes to topological reactivity and much more The definitions within the text are accompanied by brief but comprehensive explicative essays as well as figures tables etc providing a holistic understanding of the concepts presented **Handbook of Physics** William Herbert White,1912 **Handbook of Modern Chemistry** Charles Meymott Tidy,1878 [Handbook of Chemical Engineering](#) Donald Macy Liddell,1922 **ASM Handbook** ASM International. Handbook Committee,1997-12 This volume is a comprehensive reference on the basic concepts methodologies and information sources dealing with materials selection and its integration with engineering design processes Contents include contributions from 100 experts involved with design materials selection and manufacturing Addresses metals ceramics polymers and composites and provides many case histories and examples **Metal-Organic Frameworks in Biomedical and Environmental Field** Patricia Horcajada Cortés,Sara Rojas Macías,2021-03-29 This book joins an international and interdisciplinary group of leading experts on the biomedical energy and environmental applications of Metal Organic Frameworks MOFs The resulting overview covers everything from

the environmentally friendly and scale up synthesis of MOFs their application in green energy generation and storage and water purification to their use as drug delivery systems biosensors and their association with relevant macromolecules genes enzymes This book is focused on the interest of MOFs in applications such as the leading edge environmental energy related and biomedical fields The potential of MOFs in these areas is currently progressing at a fast pace since the wide possibilities that MOFs offer in terms of composition topology incorporation of active species in their porosity on their external surface or within the framework and post synthetic modifications among others The aim here is to provide future research goals that emphasize relevant nuances to this class of materials as a whole
