

FINITE DIFFERENCES

Consider the arguments $x_0, x_1, x_2, \dots, x_n$ and the entries $y_0, y_1, y_2, \dots, y_n$. $y = f(x)$ be a function of x . Let us assume that the values of x are in increasing order and equally spaced with a space length h . Then the values of x may be taken to be $x_0, x_0+h, x_0+2h, \dots, x_0+nh$ and the function assumes the values $f(x_0), f(x_0+h), f(x_0+2h), \dots, f(x_0+nh)$. Here we study some of the finite differences of the function $y = f(x)$

Forward Difference Operator(Δ):

Let $y = f(x)$ be a given function of x . Let $y_0, y_1, y_2, \dots, y_n$ be the values of y at $x_0, x_1, x_2, \dots, x_n$ respectively.

Then $y_1 - y_0, y_2 - y_1, y_3 - y_2, \dots, y_n - y_{n-1}$ are called the **first (forward) differences** of the function y . They are denoted by $\Delta y_0, \Delta y_1, \Delta y_2, \dots, \Delta y_{n-1}$ respectively.

(i.e) $\Delta y_0 = y_1 - y_0, \Delta y_1 = y_2 - y_1, \Delta y_2 = y_3 - y_2, \dots, \Delta y_{n-1} = y_n - y_{n-1}$

In general, $\Delta y_n = y_{n+1} - y_n, n = 0, 1, 2, 3, \dots$

The symbol Δ is called the forward difference operator and pronounced as **delta**.

The forward difference operator Δ can also be defined as $\Delta f(x) = f(x+h) - f(x)$, h is the equal interval of spacing.

Proof of these properties are not included in our syllabus:

Properties of the operator Δ :

Property 1: If c is a constant then $\Delta c = 0$

Proof: Let $f(x) = c$

$\therefore f(x+h) = c$ (where ' h ' is the interval of difference)

$$\Delta f(x) = f(x+h) - f(x)$$

$$\Delta c = c - c = 0$$

Property 2: Δ is distributive i.e. $\Delta(f(x) + g(x)) = \Delta f(x) + \Delta g(x)$

Proof: $\Delta[f(x) + g(x)] = [f(x+h) + g(x+h)] - [f(x) + g(x)]$

$$= f(x+h) + g(x+h) - f(x) - g(x)$$

Programs for Computer Simulation in Geology John Warvelle Harbaugh, Graeme Bonham-Carter, William M. Merrill, 1971 The ONR Technical Report presents a sequence of computer programs that have been developed as part of a continuing program to apply computer simulation techniques to shallow water marine sedimentation Most of the programs are relatively short and may be regarded as modules for representing specific processes The modules are not generally useful by themselves for realistic simulation of geologic processes but instead are intended for ultimate use as components in larger simulation applications In many respects the programs may be regarded as pedagogical models that illustrate a particular mathematical tool applied in a sedimentation context Hopefully these program modules will be a step toward providing a generalized base on which other persons who wish to use simulation techniques can build

Discovering Mathematics with Magma Wieb Bosma, John Cannon, 2007-07-10 The appearance of this volume celebrates the first decade of Magma a new computer algebra system launched at the First Magma Conference on Computational Algebra held at Queen Mary and Westfield College London August 1993 This book introduces the reader to the role Magma plays in advanced mathematical research Each paper examines how the computer can be used to gain insight into either a single problem or a small group of closely related problems The intention is to present sufficient detail so that a reader can gain insight into the mathematical questions that are the origin of the problems and develop an understanding as to how such computations are specified in Magma It is hoped that the reader will come to a realisation of the important role that computational algebra can play in mathematical research Readers not primarily interested in using Magma will easily acquire the skills needed to undertake basic programming in Magma while experienced Magma users can learn both mathematics and advanced computational methods in areas related to their own The core of the volume comprises 14 papers The authors were invited to submit articles on designated topics and these articles were then reviewed by referees Although by no means exhaustive the topics range over a considerable part of Magma's coverage of algorithmic algebra from number theory and algebraic geometry via representation theory and computational group theory to some branches of discrete mathematics and graph theory The papers are preceded by an outline of the Magma project a brief summary of the papers and some instructions on reading the Magma code A basic introduction to the Magma language is given in an appendix

The editor expresses their gratitude to the contributors to this volume both for the work put into producing the papers and for their patience
