Orbital Futures, Selected Documents in Air Force Space History, Vol. 2, 2004, 2004 [The International Atlas of Mars Exploration: Volume 2, 2004 to 2014](#) Philip J. Stooke, 2016-04-07 Beginning with the landing of the Spirit and Opportunity rovers in 2004 and concluding with the end of the Curiosity mission in 2014 this second volume of The International Atlas of Mars Exploration continues the story of Mars exploration in spectacular detail It is an essential reference source on Mars and its moons combining scientific and historical data with detailed and unique illustrations to provide a thorough analysis of twenty first century Mars mission proposals spacecraft operations landing site selection and surface locations Combining a wealth of data facts and illustrations most created for this volume the atlas charts the history of modern Mars exploration in more detail than ever before Like the first volume the atlas is accessible to space enthusiasts but the bibliography and meticulous detail make it a particularly valuable resource for academic researchers and students working in planetary science and planetary mapping [Path To Transformational Space Exploration, The \(In 2 Volumes\)](#) Philip Lubin, 2022-03-14 In this book professor Lubin lays out the fundamental physics and mathematics required to radically alter our capabilities in propulsion to enable extremely high speed space flight both in our solar system and beyond The case is made that the only currently viable solution to enable this transformation including relativistic flight for the first interstellar robotic missions is using large scale directed energy Traditional methods of propulsion are not capable of achieving the speed required for rapid missions in our solar system including fast crewed missions to Mars as well as the many robotic missions desired both in our solar system and to the nearest stars Humanity has now reached a technological tipping point with the ability to project power over vast distances with transformational implications in a wide variety of areas from propulsion to beaming power throughout our solar system to planetary defence In a series of over 50 technical papers the fundamentals of this transformation are outlined and synthesized in this book allowing a detailed understanding of the many challenges ahead and a roadmap to the future direction for human exploration far beyond our solar system While the road ahead is long and challenging it provides the path to radically altering humanity's future in ultra high speed space exploration *The International Atlas of Mars Exploration: Volume 1, 1953 to 2003* Philip J. Stooke, 2012-09-24 Covering the first five decades of the exploration of Mars this atlas is the most detailed visual reference available It brings together for the first time a wealth of information from diverse sources featuring annotated maps photographs tables and detailed descriptions of every Mars mission in chronological order from the dawn of the space age to Mars Express Special attention is given to landing site selection including reference to some missions that were planned but never flew Phobos and Deimos the tiny moons of Mars are covered in a separate section Contemporary maps reveal our improving knowledge of the planet's surface through the latter half of the twentieth century Written in non technical language this atlas is a unique resource for anyone interested in planetary sciences the history of space exploration and cartography while the detailed bibliography and chart data are
