Genetic Algorithms For Pattern Recognition:

Genetic Algorithms for Pattern Recognition Sankar K. Pal, Paul P. Wang, 2017-11-22 Solving pattern recognition problems involves an enormous amount of computational effort. By applying genetic algorithms, a computational method based on the way chromosomes in DNA recombine, these problems are more efficiently and more accurately solved. Genetic Algorithms for Pattern Recognition covers a broad range of applications in science and technology, describing the integration of genetic algorithms in pattern recognition and machine learning problems to build intelligent recognition systems. The articles written by leading experts from around the world accomplish several objectives: they provide insight into the theory of genetic algorithms, they develop pattern recognition theory in light of genetic algorithms, and they illustrate applications in artificial neural networks and fuzzy logic. The cross-sectional view of current research presented in Genetic Algorithms for Pattern Recognition makes it a unique text ideal for graduate students and researchers.

[On the Role of Genetic Algorithms in the Pattern Recognition Task of Classification](#) Isaac Ben Sherman, 2017 In this dissertation we ask: formulate an apparatus for answering and answer the following three questions: Where do Genetic Algorithms fit in the greater scheme of pattern recognition? Given primitive mechanics, can Genetic Algorithms match or exceed the performance of theoretically based methods? Can we build a generic universal Genetic Algorithm for classification? To answer these questions we develop a genetic algorithm which optimizes MATLAB classifiers and a variable length genetic algorithm which does classification based entirely on boolean logic. We test these algorithms on disparate datasets rooted in cellular biology, music theory, and medicine. We then get results from these and compare their confusion matrices. For those unfamiliar with Genetic Algorithms we include a primer on the subject in chapter 1 and include a literature review and our motivations. In Chapter 2 we discuss the development of the algorithms necessary as well as explore other features necessitated by their existence. In Chapter 3 we share and discuss our results and conclusions. Finally, in Chapter 4 we discuss future directions for the corpus we have developed.

Genetic Algorithms Mohit Verma, 1991 Abstract Genetic algorithms have been gaining much interest since the early 1970s and have intrigued

people from the fields of machine learning artificial intelligence neural networks and operations research This paper describes the approach of genetic algorithms applied to neural networks The experiments were conducted using various functions such as XOR AND SINE and different network sizes Based on the experimental data we concluded that for small network architectures represented by the functions XOR AND etc genetic algorithms were very effective but for larger network architectures represented by the functions SINE ENCODE etc genetic algorithms were not effective and the desired results were not achieved within a reasonable period of time

Classification and Learning Using Genetic Algorithms Sanghamitra Bandyopadhyay,Sankar Kumar Pal,2007-05-17 This book provides a unified framework that describes how genetic learning can be used to design pattern recognition and learning systems It examines how a search technique the genetic algorithm can be used for pattern classification mainly through approximating decision boundaries Coverage also demonstrates the effectiveness of the genetic classifiers vis vis several widely used classifiers including neural networks

Evolutionary Synthesis of Pattern Recognition Systems Bir Bhanu,Yingqiang Lin,Krzysztof Krawiec,2006-03-30 Evolutionary computation is becoming increasingly important for computer vision and pattern recognition and provides a systematic way of synthesis and analysis of object detection and recognition systems Incorporating learning into recognition systems will enable these systems to automatically generate new features on the fly and cleverly select a good subset of features according to the type of objects and images to which they are applied This unique monograph investigates evolutionary computational techniques such as genetic programming linear genetic programming coevolutionary genetic programming and genetic algorithms to automate the synthesis and analysis of object detection and recognition systems The purpose of incorporating learning into the system design is to avoid the time

consuming process of feature generation and selection and to reduce the cost of building object detection and recognition systems Researchers professionals engineers and students working in computer vision pattern recognition target recognition machine learning evolutionary learning image processing knowledge discovery and data mining cybernetics robotics automation and psychology will find this well developed and organized volume an invaluable resource **Pattern**

Levine,1999-02 This book is written for researchers interested in categorizing samples on the basis of regularities in observed data This text is more than just an introduction to the application of pattern recognition methods to problems in chemistry and chemical engineering It is intended to serve as a primary source of information for pattern recognition techniques that are useful for the analysis of experimental data The concepts are presented in an easily understood manner for use by readers with only a basic knowledge of statistics **Energy Minimization Methods in Computer Vision and Pattern Recognition** Mario

Figueiredo, Josiane Zerubia,2001-08-22 This book constitutes the refereed proceedings of the Third International Workshop on Energy Minimization Methods in Computer Vision and Pattern Recognition EMMCVPR 2001 held in Sophia Antipolis France in September 2001 The 42 revised full papers presented were carefully reviewed and selected from 70 submissions The book offers topical sections on probabilistic models and estimation image modeling and synthesis clustering grouping and segmentation optimization and graphs and shapes curves surfaces and templates Soft Computing for Image

Processing Sankar K. Pal,Ashish Ghosh, Malay K. Kundu,2013-03-19 Any task that involves decision making can benefit from soft computing techniques which allow premature decisions to be deferred The processing and analysis of images is no exception to this rule In the classical image analysis paradigm the first step is nearly always some sort of segmentation process in which the image is divided into hopefully meaningful parts It was pointed out nearly 30 years ago by Prewitt 1 that the decisions involved in image segmentation could be postponed by regarding the image parts as fuzzy rather than crisp subsets of the image It was also realized very early that many basic properties of and operations on image subsets could be extended to fuzzy subsets for example the classic paper on fuzzy sets by Zadeh 2 discussed the set algebra of fuzzy sets using sup for union and inf for intersection and extended the definition of convexity to fuzzy sets These and similar ideas allowed many of the methods of image analysis to be generalized to fuzzy image parts For a recent review on geometric description of fuzzy sets see e g 3 Fuzzy methods are also valuable in image processing and coding where learning processes can be important in choosing the parameters of filters quantizers etc **Scalable Pattern Recognition Algorithms** Pradipta

Maji,Sushmita Paul,2014-03-19 This book addresses the need for a unified framework describing how soft computing and machine learning techniques can be judiciously formulated and used in building efficient pattern recognition models The text reviews both established and cutting edge research providing a careful balance of theory algorithms and applications with a particular emphasis given to applications in computational biology and bioinformatics Features integrates different soft

computing and machine learning methodologies with pattern recognition tasks discusses in detail the integration of different techniques for handling uncertainties in decision making and efficiently mining large biological datasets presents a particular emphasis on real life applications such as microarray expression datasets and magnetic resonance images includes numerous examples and experimental results to support the theoretical concepts described concludes each chapter with directions for future research and a comprehensive bibliography
