

In the preceding exercise we discovered experimentally certain properties of reflection of a point across a line. Of course experiments only suggest that these properties hold. It will not be until a later chapter that we *prove* that these properties are valid. However, right now a simple diagram suggests the reason. Connect B to B^* with a line, as in the picture below.

Now observe that if the paper is folded on line l , then the upper triangle folds over onto the lower triangle. Discuss with your classmates why this suggests that $PB = PB^*$ and angle 1 = angle 2.

10. In the picture below, B^* is the reflection of B across line l . Why is $AP + PB = AP + PB^*$? [Hint: Central 9(b)]

The Triangle Inequality

The next exercise deals with a fundamental property of distance. It is the basis for the intuitive idea that "the shortest path between two points is the straight line joining the points."

11. Draw three triangles of different shapes. (Since you will need to measure their sides, do not draw them too small. Make their sides between 3 and 10 centimeters long.) In each triangle, compare the sum of the lengths of two sides with the length of the third side. What do you observe?

Your observation in the preceding exercise will be crucial in solving the problem of the camper and the burning tent.

THE TRIANGLE INEQUALITY

The length of any side of a triangle is less than the sum of the lengths of the other two sides.

Geometry G. D. Chakerian,1987 *Geometry* Sherman K,G. D. Chakerian,Sherman K. Stein,1984 **Euclidean Geometry** David M. Clark,2012-06-26 Geometry has been an essential element in the study of mathematics since antiquity Traditionally we have also learned formal reasoning by studying Euclidean geometry In this book David Clark develops a modern axiomatic approach to this ancient subject both in content and presentation Mathematically Clark has chosen a new set of axioms that draw on a modern understanding of set theory and logic the real number continuum and measure theory none of which were available in Euclid s time The result is a development of the standard content of Euclidean geometry with the mathematical precision of Hilbert s foundations of geometry In particular the book covers all the topics listed in the Common Core State Standards for high school synthetic geometry The presentation uses a guided inquiry active learning pedagogy Students benefit from the axiomatic development because they themselves solve the problems and prove the theorems with the instructor serving as a guide and mentor Students are thereby empowered with the knowledge that they can solve problems on their own without reference to authority This book written for an undergraduate axiomatic geometry course is particularly well suited for future secondary school teachers In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession *Solutions Key* G.
