Geometry Of Harmonic Maps:

Geometry of Harmonic Maps Yuanlong Xin, 1996-04-30 Harmonic maps are solutions to a natural geometrical variational problem. This notion grew out of essential notions in differential geometry such as geodesics, minimal surfaces, and harmonic functions. Harmonic maps are also closely related to holomorphic maps in several complex variables, to the theory of stochastic processes, to nonlinear field theory in theoretical physics, and to the theory of liquid crystals in materials science. During the past thirty years, this subject has been developed extensively. The monograph is by no means intended to give a complete description of the theory of harmonic maps. For example, the book excludes a large part of the theory of harmonic maps from 2-dimensional domains where the methods are quite different from those discussed here. The first chapter consists of introductory material. Several equivalent definitions of harmonic maps are described, and interesting examples are presented. Various important properties and formulas are derived. Among them are Bochner type formula for the energy density and the second variational formula. This chapter serves not only as a basis for the later chapters but also as a brief introduction to the theory. Chapter 2 is devoted to the conservation law of harmonic maps. Emphasis is placed on applications of conservation law to the monotonicity formula and Liouville type theorems. *Geometry of Harmonic Maps* Yuanlong Xin, 2011-10-29 Harmonic maps are solutions to a natural geometrical variational problem. Wood's 60th birthday. These papers reflect the many facets of the theory of harmonic maps and its links and connections with other topics in Differential and Riemannian Geometry. Two long reports, one on constant mean curvature surfaces by F. Pedit and the other on the construction of harmonic maps by J. C. Wood, open the proceedings. These are followed by a mix of surveys on Prof. Wood's area of expertise: Lagrangian surfaces, biharmonic maps, locally conformally

Kähler manifolds and the DDVV conjecture as well as several research papers on harmonic maps Other research papers in the volume are devoted to Willmore surfaces Goldstein Pedrich flows contact pairs prescribed Ricci curvature conformal fibrations the Fadeev Hopf model the Compact Support Principle and the curvature of surfaces *Two Reports on Harmonic Maps* James Eells, Luc Lemaire, 1995 Harmonic maps between Riemannian manifolds are solutions of systems of nonlinear partial differential equations which appear in different contexts of differential geometry They include holomorphic maps minimal surfaces models in physics Recently they have become powerful tools in the study of global properties of Riemannian and Kählerian manifolds A standard reference for this subject is a pair of Reports published in 1978 and 1988 by James Eells and Luc Lemaire This book presents these two reports in a single volume with a brief supplement reporting on some recent developments in the theory It is both an introduction to the subject and a unique source of references providing an organized exposition of results spread throughout more than 800 papers *Lectures on Harmonic Maps* Richard Schoen, Shing-Tung Yau, 2013-04-30 [Harmonic Maps Into Homogeneous Spaces](#) Malcolm Black, 2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists [Harmonic Maps Between Surfaces](#) Jürgen Jost, 2006-12-08 **Harmonic and Minimal Maps** Gábor Tóth, 1984 **Harmonic Maps Between Riemannian Polyhedra** James Eells, B. Fuglede, 2001-07-30 Harmonic maps between smooth Riemannian manifolds play a ubiquitous role in differential geometry Examples include geodesics viewed as maps minimal surfaces holomorphic maps and Abelian integrals viewed as maps to a circle The theory of such maps has been extensively developed over the last 40 years and has significant applications throughout mathematics This 2001 book extends that theory in full detail to harmonic maps between broad classes of singular Riemannian polyhedra with many examples being given The analytical foundation is based on existence and regularity results which use the potential theory of Riemannian polyhedral domains viewed as Brelot harmonic spaces and geodesic space targets in the sense of Alexandrov and Busemann The work sets out much material on harmonic maps between singular spaces and will hence serve as a concise source for all researchers working in related fields **Harmonic Maps and Integrable Systems** John C. mappings have played in recent years and will likely to play in the future an important role in Differential Geometry and Theoretical Physics where they are known as s models These Proceedings develop both aspects of the theory with a special attention to the constructive methods in particular the so called twistorial approach It includes expository articles on the twistorial methods the various appearance of models in Physics the powerful analytic theory of regularity of SCHOEN UHLENBECK

Harmonic Maps: Selected Papers By James Eells And Collaborators James Eells,1992-08-21 These original research papers written during a period of over a quarter of a century have two main objectives The first is to lay the foundations of the theory of harmonic maps between Riemannian Manifolds and the second to establish various existence and regularity theorems as well as the explicit constructions of such maps

Harmonic Maps and Minimal Immersions with Symmetries James Eells,Andrea Ratto,1993 The aim of this book is to study harmonic maps minimal and parallel mean curvature immersions in the presence of symmetry In several instances the latter permits reduction of the original elliptic variational problem to the qualitative study of certain ordinary differential equations the authors primary objective is to provide representative examples to illustrate these reduction methods and their associated analysis with geometric and topological applications The material covered by the book displays a solid interplay involving geometry analysis and topology in particular it includes a basic presentation of 1 cohomogeneous equivariant differential geometry and of the theory of harmonic maps between spheres

Harmonic Maps, Loop Groups, and Integrable Systems Martin A. Guest,1997-01-13 Harmonic maps are generalisations of the concept of geodesics They encompass many fundamental examples in differential geometry and have recently become of widespread use in many areas of mathematics and mathematical physics This is an accessible introduction to some of the fundamental connections between differential geometry Lie groups and integrable Hamiltonian systems The specific goal of the book is to show how the theory of loop groups can be used to study harmonic maps By concentrating on the main ideas and examples the author leads up to topics of current research The book is suitable for students who are beginning to study manifolds and Lie groups and should be of interest both to mathematicians and to theoretical physicists
